Dear Students in AP® European History:

Greetings to you as you begin your European history course. The three of us (Clare Haru Crowston, Merry Wiesner-Hanks, and Joe Perry) are the current authors of this book, and we want you to know that we were all once like you, high school students juggling friends and studies and perhaps extracurricular activities. Through high school history courses, like this AP® European History course, and our college courses, we developed a fascination with history that propelled us into history as a career. Though most of you will not become professional historians, we hope this course and this book will spark or enhance an interest in history that will continue throughout your life. History can be experienced not just in classrooms but in everything around you — houses and the furniture in them, places of worship, public buildings, roads and the cars driving on them, photographs in albums or on your cell phone, family heirlooms, souvenirs from trips, and on and on. And the thinking skills you learn by studying history can be applied to everything as well, from your classes in other subjects to a job you might be doing now to the career you hope to have after you finish your education to your role as an active citizen.

Believe it or not, we first encountered this book when we were still students, using an earlier edition in our own college courses, so we approached it as you are now, as readers and consumers. The initial three authors, John McKay, Bennett Hill, and John Buckler, designed this text to infuse new life into the study of European history at a point when social history was dramatically changing the ways we understood the past. The original authors decided to write a book that would re-create the lives of ordinary people in appealing human terms, while also giving major economic, political, cultural, and intellectual developments the attention they unquestionably deserve. As students, we enjoyed the book for its readable and relatable view of history, so we welcomed the chance to come aboard as authors. As such, we remain committed to the original authors’ vision, though we now have a broader definition of social history that brings the initial idea into the twenty-first century. History as a discipline never stands still, and over the last several decades cultural history has joined social history as a source of dynamism. Because of its emphasis on the ways people
both lived and thought about their lives, *A History of Western Society* has always included a large amount of cultural history, ranging from important works of philosophy and literature to popular songs and stories. We have enhanced this material, so in the book’s pages you will find discussion of men’s and women’s actual experiences and the ways they reflected on these experiences to create meaning. All three of us regularly teach introductory history courses at the college level and thus bring insights from our classrooms to your text.

Along with *our* words about the European past, you will also find the words of many *others* in this book, along with art and objects they created. Every chapter has written and visual primary sources that come from prominent and ordinary individuals with a diversity of perspectives, ranging from diaries, speeches, letters, poetry, and drama to artifacts, architecture, tomb inscriptions, and propaganda posters. Some of these stand alone in a feature we call *Evaluating the Evidence*, and sometimes they are grouped together in a feature we call *Thinking Like a Historian*. Whether alone or in a group, the primary sources always include a headnote providing you with information about the source and offer questions that will help you understand the source and connect it to the information in the rest of the chapter. These primary sources will provide you with firsthand encounters with people of the past along with the means and tools for building your historical thinking skills, including analysis of evidence, chronological reasoning, explaining causation, and evaluating context. The AP® European History exam will measure both your knowledge of European history and your skill to analyze it, and this book, with these primary source features in particular, is designed to help you to develop both.

Historians analyze evidence, just as detectives do, but they also tell stories, and in this book there are lots of stories. The *Individuals in Society* biographical essays offer brief studies of individuals, both famous and obscure, or occasionally of groups, who sought to understand and shape their world, just as you do. These include Rose Bertin, the first celebrity fashion stylist who clothed Queen Marie Antoinette of France in the eighteenth century, and Theodore Herzl, the journalist and playwright who in the late nineteenth century called on the Jewish people to found an independent Jewish state and European rulers to support it. In the *Living in the Past* features, we use material objects and images to focus on relatively narrow aspects of social and cultural history in order to write compelling stories that show how life in the past was both similar to and different from our lives today. So we discuss topics such as the foods that came from the Americas, the coffeehouses of Paris, street demonstrations and protests, or modern streamlined design. We hope that through these features you will explore the deeper
ramifications of things around you that you might otherwise not think much about, such as consumer goods or even the money in your pocket.

We were once students ourselves, and as previously mentioned, we interact with students every day, so we know firsthand and take seriously the challenges you face in understanding, retaining, and mastering so much material that is often unfamiliar. We have tried to make the book student-centered, with focus questions at the beginning of each chapter key to the main chapter headings to provide guidance in grasping the most important topics. At the end of each chapter, we offer Make Connections questions that allow you to assess larger developments across chapters, again beefing up your historical thinking skills in evaluating change and continuity, making comparisons, and analyzing context and causation. At the very end of each chapter, Looking Back, Looking Ahead provides an interpretation of the chapter’s main developments, while introducing events that you will encounter in the chapters to come, so that you can begin to see history as an ongoing process of interrelated events, just as historians do.

AP® European History, with this book that serves it, is a college-level course, and everything we have discussed so far is in the college edition. Recognizing your distinctive needs, however, we added a few special features in this edition. AP® Historical Thinking Skills: A Primer (the first set of orange-bordered pages) takes you through the historical thinking skills in great detail, with exercises based on material in the book that will allow you to practice these skills. Just as learning to play a sport or an instrument involves practice and training, so does learning how to do history. The primer also includes suggestions for getting the most out of reading this book (or any nonfiction book, for that matter) and advice on how you can develop the writing skills necessary for not only the AP® European History course and exam but also future AP® and college courses. We suggest that you read this primer before you start the course and that you refer to it often. Some of what you find may not make much sense to you now, but it’s important that you encounter these terms and ideas early so that they will be very familiar to you by the time you are ready to take the exam.

In addition to the AP® skills primer, we created introductions that segment the book’s twenty chapters into the four historical time periods of the AP® European History course. Located immediately before Chapters 11, 15, 20, and 25, these introductions offer an overview of AP® Key Concepts and Thematic Learning Objectives as presented here in this text. Here you will find specific page references

These primary sources will provide you with firsthand encounters with people of the past along with the means and tools for building your historical thinking skills, including analysis of evidence, chronological reasoning, explaining causation, and evaluating context.
Every historian understands and organizes the past in somewhat different ways, which is what makes our discipline **focus more on discussion and debate and less on lecture**.

Remember as you read that these pages are filled with our interpretations and analyses. You can **and will** have your own. Don’t be afraid to critically examine and question as you read. You are not doing this alone. Your teacher is your guide through this process, and your fellow students will give you opportunities for both collaboration and debate. Our hope is that this course is just the starting point and that you will begin to watch national and international news with greater understanding and critical thought. What you learn in this course will enhance your life today, if you let it. Good luck as you embark on this journey!

Sincerely,

CLARE HARU CROWSTON
MERRY WIESNER-HANKS
JOE PERRY
Acknowledgments

It is a pleasure to thank the instructors who read and critiqued the manuscript through its development:

Robert Blackey, California State University, San Bernardino
Kevin Caldwell, Blue Ridge Community College
Amy Colon, SUNY Sullivan
Maia Conrad, Thomas Nelson Community College
Scott Gavorsky, Great Basin College
George Kaloudis, Rivier College
Roy Koepp, University of Nebraska at Kearney
Jesse Lynch, Shasta College
Michael McKeown, Daytona State College
Jennifer Morris, Mount St. Joseph University
Mark Rubino, Central Bucks East High School
Stephen Santelli, Northern Virginia Community College
Brett Sommer, North Tonawanda High School
Calvin Tesler, Lehigh University
Doris Tishkoff, Quinnipiac University
Jack Travers, Boston College High School

Many of our colleagues at the University of Illinois, the University of Wisconsin–Milwaukee, and Georgia State University continue to provide information and stimulation, often without even knowing it. We thank them for it. We also thank the many students over the years with whom we have used earlier editions of this book. Their reactions and opinions helped shape the revisions to this edition, and we hope it remains worthy of the ultimate praise that they bestowed on it: that it’s “not boring like most textbooks.” Merry Wiesner-Hanks would, as always, also like to thank her husband, Neil, without whom work on this project would not be possible. Clare Haru Crowston thanks her husband, Ali, and her children, Lili, Reza, and Kian, who are a joyous reminder of the vitality of life that we try to showcase in this book. Joe Perry thanks his colleagues and students at Georgia State for their intellectual stimulation and is grateful to Joyce de Vries for her unstinting support and encouragement.

Each of us has benefited from the criticism of our coauthors, although each of us assumes responsibility for what he or she has written. Merry Wiesner-Hanks intensively reworked John Buckler’s Chapters 1–6 and revised Chapters 7–13; Clare Crowston wrote and revised Chapters 14–19 and took responsibility for John McKay’s Chapter 20; and Joe Perry took responsibility for John McKay’s Chapters 21–24 and wrote and revised Chapters 25–30.

We’d especially like to thank the founding authors, John P. McKay, Bennett D. Hill, and John Buckler, for their enduring contributions and for their faith in each of us to carry on their legacy.
**Start Smart!**

Notice that this book is organized into four parts. These parts align to the four time periods established by the College Board for the AP® European History course. Each part and chapter of this text is structured around a common set of features designed to convey the rich story of Europeans while helping you develop the skills required to realize success on the AP® European History exam. Follow these steps to begin exploring history.

**AP® Historical Thinking Skills: A Primer**

**Dave Neumann**
Director, The History Project
California State University–Long Beach

**Merry Wiesner-Hanks**
Distinguished Professor of History
University of Wisconsin–Milwaukee

**STUDENTS AND ADULTS ALIKE often grumble that history is just a bunch of facts and dates to memorize. While it’s true that studying history requires data, information, and facts and dates, that’s not the essence of what history is. History is a way of understanding the world by learning about the past. It is an interpretive reconstruction of the past based on several skills. Advanced Placement (AP®) European History requires students to demonstrate an understanding of these skills. This primer will help you develop the historical thinking skills needed to succeed in your AP® European History class and exam, as well as improve the critical thinking, reading, and writing skills that will be useful in college, in your future career, and in active citizenship.**

**Historical Thinking Skills**

The AP® European History curriculum introduces you to nine thinking skills in four categories, representing the ways historians talk about the past. These skills are sometimes described as “habits of mind.” This useful phrase should remind you that a skill needs to be practiced repeatedly until it becomes second nature. Because practice is an integral part of learning to think historically, the sections below include exercises to help you develop these “habits of mind.” Like shooting free throws, rehearsing dance moves, or playing scales, historical thinking skills need to be exercised regularly until you can use them easily and almost effortlessly.

Although we discuss each skill separately below, keep in mind that these skills overlap in many ways. For example, you can’t make a historical argument without also evaluating evidence. So as you develop one historical thinking skill, you’ll also be learning and practicing other skills at the same time.

**Analyzing Historical Sources and Evidence**

To start, historians make arguments about the past based on evidence, which is categorized as either primary or secondary sources. A primary source is something produced in the time period you are studying. In contrast, a secondary source is a text written about that time period, usually something a historian writes long after the fact. Secondary sources result from scholarly research of primary sources. Effective historical thinking requires the ability to analyze primary sources — reading carefully for the author’s point of view and purpose, the format of the document, and its context — as well as to analyze the ways historians create interpretations (secondary sources) based on their own use of primary source evidence.
Begin your study of each part by reading the **Period Opening Pages**. They provide an overview of the concepts you will study in the time period. Then review **Understanding AP® Themes** for questions to keep in mind as you read.

As mentioned in the AP® primer, begin each chapter with a quick pre-read. **Chapter Introductions and Previews** offer an overview and outline where you can insert details as you read the chapters.
Read with a Purpose

The following features will help you read and learn about important individuals, groups, and events in European history since 1300. Through these tools and the narrative of the text itself, you will acquire the knowledge and information required for the AP® exam.

Focus Questions guide your reading and help you focus on what's important.

1775–1815

World War and Republican France, 1791–1799

FOCUS QUESTION Why and how did the French Revolution take a radical turn entailing terror at home and war with European powers?

When Louis XVI accepted the National Assembly's constitution in September 1791, a young provincial lawyer and delegate named Maximilien Robespierre (1758–1794) concluded that “the Revolution is over.” Robespierre was right in the sense that the Revolution was just getting started, for a much more radical era lay ahead, one that would bring war with foreign powers, the declaration of war at home, and a transformation in France's government.

The International Response

The outbreak of revolution in France produced great excitement and a sharp division of opinion in Europe and the United States. On the one hand, liberals and radicals saw a mighty triumph of liberty over despotism. On the other hand, conservative leaders such as British statesman Edmund Burke (1729–1797) were intensely troubled. In 1790 Burke published Reflections on the Revolution in France, in which he defended inherited privileges. He glorified Britain's representative Parliament and predicted that reforms like those occurring in France would lead only to chaos and tyranny.

One passionate writer came from a young writer in London. Mary Wollstonecraft (1759–1797), impressed by Burke's book, Wollstonecraft (WOLL-ston-kraft) wrote a blistering attack. A Vindication of the Rights of Man (1790). Two years later, she published her masterpiece, A Vindication of the Rights of Women (1792). Like de Gouges in France, Wollstonecraft demanded equal rights for women. She also advanced conclusions not of the belief that it would make women better wives and mothers, good citizens, and economically independent. Concerning very radical for the time, the book became a founding text of the feminist movement.

The kings and nobles of continental Europe, who had at first welcomed the Revolution in France as making a comparing power, now feared its impact. In June 1791, the royal family was arrested after a failed attempt to escape France. To support the Revolution, the attempted flight was proof that the king was treacherously seeking foreign support for an invasion of France. To the monarchs of Austria and Prussia, the arrest of a crowned monarch was unacceptable. Two
Individuallys in Society features for biographical essays of individuals, both famous and obscure, some of whom may appear on your AP® exam.

LIVING IN THE PAST
A Revolution of Culture and Daily Life

The French Revolution brought sweeping political and social change to France, removing one of the oldest monarchies in Europe in favor of broad-based representative government and eliminating age-old distinctions between nobles and commons. Revolutionaries found, however, that these measures were not enough to transform the nation. They therefore undertook a parallel revolution of culture intended to purify and regenerate the French people and turn former royal subjects into patriotic citizens capable of realizing the dream of liberty, equality, and fraternity. To bring about cultural revolution, officials of the new republic targeted the most fundamental elements of daily life: the experience of space and time. Prior to the Revolution, regions of France had their own systems of measurement, meaning that the length of an inch or the weight of a pound differed substantially across the realm. Disguised with the inefficiency of this state of affairs and determined to impose national unity, the government adopted the decimal-based metric system first proposed in 1790. The length of the meter was scientifically set at one ten-millionth of the distance from the pole to the equator. Henceforth, all French citizens would inhabit spaces that were measured and divided in the same way. The government attempted a similar rationalization of the calendar. Instead of twelve months of varying lengths, each of the twelve months on the new revolutionary calendar was made up of three ten-day weeks, with a five- or six-day interval at the end of each year. To mark the total length of time, the new calendar began on Year 1 on the day of the foundation of the French republic (September 22, 1792). A series of festivals with patriotic themes replaced the traditional Catholic feast days. One of the most important was the festival of the Cult of the Supreme Being (a form of deism promoted by Robespierre as the state religion). There was even a short-lived attempt to put the clock on a decimal system.

Cultural revolution also took on more concrete forms. Every citizen was required to wear a tricolor cockade on his or her hat to symbolize loyalty to the republic. Employers maintained strict loyalty to the politics of the new French nation. Bereaved family members would mourn for the deceased by wearing black according to the calendar. Revolutions have in common? How did they differ?
Humanist Learning

A Renaissance humanist wrote often and beautifully about education, and learning was also a subject of artistic works, such as humanist fables. What do humanists see as the best course of study with the purpose of education, and who are they? (p. xxviii)

ANALYZING THE EVIDENCE

1. According to these sources, what should people learn? Why should they learn?
2. Prepare a humanist fable or a letter to a humanist that reflects the evidence of the fables and the letters included in this chapter. Use the evidence to support your interpretation.
3. Write an essay on the topic of learning and education. Use the evidence to support your argument.

PUTTING IT ALL TOGETHER

Using the sources above, along with what you have learned in class and in this chapter, write a short paper on the topic of learning and education. Use the evidence to support your argument.

EVALUATING THE EVIDENCE

1. Based on the evidence, what does it mean to be a historian? How does this evidence support this idea?
2. Write a short essay that evaluates the evidence of this chapter.

THINKING LIKE A HISTORIAN

Practice Thinking Like a Historian in each chapter. This important feature offers practice for the comprehensive Document-Based Question on the AP® exam. Questions included with this feature help you analyze the evidence and develop your argument.

Think Like a Historian

As you become acquainted with the people, groups, and events of European history, you can start applying your knowledge. The following tools will help you analyze what you’ve learned and create your own arguments based upon evidence.

Pay close attention to Evaluating the Evidence. The guided questions included with these visual and written sources help you hone your AP® historical thinking skills by examining one or two sources at a time. This is an important skill for learning history and succeeding on the AP® exam.

Dance of Death

As in the thirteenth century...
Practice for the AP® Exam

Use the following tools in this course and on the AP® European History exam.

Review the chapter you just read and prepare for the next with Looking Back, Looking Ahead. This feature is more than simple summaries. It provides an interpretation of the chapter’s main developments while introducing upcoming events, so you can see history as an ongoing process of interrelated events, just as historians do.

Finally, answer the questions at the end of the chapter. The Make Connections and Review the Main Ideas questions ask you to assess larger developments across chapters, which requires you to build your historical thinking skills in the areas in which you will be tested on the AP® exam.
Advice for Responding to a Document-Based Question

Read the question carefully and note specifically what you are being asked to do. Make sure you respond to each aspect of the question. In your response, be sure to do the following:

- **State Your Thesis Clearly**
  Present an argument in the form of a thesis statement. Your thesis should address every part of the question and make it easy for the reader to find by placing it either in the introduction or the conclusion of your essay.

- **Support Your Argument with Evidence**
  Use your documents and support a clear and cohesive argument with evidence that is accurate, relevant, and supported by details from your documents.

- **Extend your argument by introducing and explaining connections between your documents.**

- **Expand Your Argument Through Synthesis**
  Support your argument with evidence to support your thesis statement.

- **Expand Your Argument Through Synthesis**
  Develop and support your argument to demonstrate the specific historical thinking skills being assessed.

- **Think Like a Historian**
  Put your argument in context, historical context, and/or the audience for at least four documents.

- **Expand Your Thesis Through Synthesis**
  Explain the implications of the author's point of view, the author's purpose, the argument that examines relationships and/or qualifications.

- **Consider Your Sources**
  Consider the context in which the evidence was written and published, the author's purpose, the source's bias, and the reliability and accuracy of the evidence.

- **Introduce New Evidence**
  Use al new evidence to strengthen or alter your argument and add substance and power to your response.

- **State Your Thesis Clearly**
  State your thesis clearly and concisely.

- **Strive for a 5**
  A theme in European history that is relevant to but not the focus of your essay (such as political, economic, social, or cultural history).

- **A different discipline or field of study (such as economics, government and politics, art history, or anthropology).**

- **A similar or contrasting development from a different time period, situation, or geographic region.**

- **An AP® theme that is relevant to but not the focus of your essay (such as political, economic, social, or cultural history).**

Advice for Responding to a Long-Essay Question

Read the question carefully and note specifically what you are being asked to do. Make sure you respond to each aspect of the question. In your response, be sure to do the following:

- **State Your Thesis Clearly**
  Present an argument in the form of a thesis statement. Your thesis should address every part of the question and be easy to find, located either in the introduction or the conclusion of your essay.

- **Expand Your Argument Through Synthesis**
  Extend your argument by introducing and explaining connections between your argument and one of the following:

  - A similar or contrasting development from a different time period, situation, or geographic region.
  - An AP® theme that is relevant to but not the focus of your essay (such as political, economic, social, or cultural history).
  - A different discipline or field of study (such as economics, government and politics, art history, or anthropology).
  - A theme in European history that is relevant to but not the focus of your essay (such as political, economic, social, or cultural history).

To build your thought processes, writing skills, and exam readiness, use the Advice Pages on the inside back cover of this text. These questions will also help you answer Thinking Like a Historian and Make Connections questions.

Use the accompanying Strive for a 5: Preparing for the AP® European History Exam for a study guide as you work your way through the course and for exam preparation as you near the exam in May.

In this text, you will find two different abbreviations for the word *circa*. Circa means “around” or “approximately” when referring to a date. The authors use *ca.* uniformly throughout their narrative and in chapter titles (such as Chapter 15). The College Board uses *c.* in the AP® European History Curriculum Framework, so you will see *c.* in the period-opening titles. Don’t be confused — *ca.* and *c.* mean the same thing.
The second part of the early modern period stretches from the Peace of Westphalia in 1648 to the Congress of Vienna in 1814–1815, two multinational agreements in which diplomats sought first to create and then to restore a balance of power in which no one nation became too strong. During this period, all states in Europe shared common projects of protecting and expanding their frontiers, raising new taxes, consolidating central control, competing for new colonies opening up in the New and Old Worlds, and expanding their share of an increasingly worldwide commercial network. Natural and human-made products from around the world flowed into Europe, and by the end of the eighteenth century people in cities who were not especially well-off could afford imported sugar, tea, coffee, and tobacco, as well as the cups, pipes, pots, and other household goods to make and consume these.

The houses of nobles and wealthy merchants were lavish and immense, with separate rooms where each family member could find privacy from servants and from each other. The homes of artisans were much plainer, and the poor were crowded into attics and cellars, but even artisans and servants could afford parasols and pocket watches, and an occasional visit to a café to read newspapers and discuss current issues. Among these issues were ideas about rationalism, progress, and values that both challenged and bolstered existing hierarchies. The countryside outside of cities changed far less. There traditions, customs, and ideas were still taught through the spoken word; stories and songs were shared orally; and natural, supernatural, and human-produced miseries were feared.

Wars in Europe were fought no longer for religion, but instead for political power, though this did not make them any less frequent, and the armies that fought them were larger and better equipped. Expanding wealth, much of it from colonial empires, allowed some individuals and some families to increase their social stature, but generally did not upset a hierarchy in which being born noble was the best assurance of power and prosperity. Only at the very end of this period would economic, political, and social grievances, combined with new ideas about reason and freedom, lead to revolutions, first in North America, then in France, and then in what became Haiti.
CONCEPT 2.1
Absolutism, Constitutionalism, and Revolution

In many states of Europe, absolutism emerged in the seventeenth century as the solution to economic stagnation and political disorder. Kings in some countries, such as France, Spain, Austria, and Prussia, claimed exclusive, absolute power, though in reality they often worked with nobles to achieve their aims. To meet the demands of running their expanding governments, rulers turned to trusted ministers, though they also asserted that they were responsible to God alone and that no other institution or group had the right to check their power. In central and eastern Europe, some rulers made legal, religious, and economic reforms that they hoped would improve society, inspired by new ideas about reason and progress that emerged with the Enlightenment. A small minority of states adopted a different path, placing sovereignty in the hands of privileged groups rather than the Crown, a form of government historians refer to as “constitutionalism.” In England disputes between the monarch and various elite groups over royal claims to power led to a civil war and ultimately to a constitutional monarchy, while in the Netherlands the Dutch established a republic that saw amazing commercial prosperity.

Conflict among various European powers over both domestic and colonial affairs led to a series of wars, culminating in the Seven Years’ War (1756–1763), in which the battlefields stretched from central Europe to India to North America, pitting a new alliance of England and Prussia against France and Austria. In the aftermath of the war, both British and French governments had to raise taxes, which led to a revolt of the British colonies in North America and their eventual independence, and was one of the factors leading to the French Revolution, which toppled the monarchy. France established first a constitutional monarchy, then a radical republic, and finally a new empire under Napoleon, though this event sparked the growth of reactive nationalism, which led to his defeat. French armies violently exported revolution beyond the nation’s borders, and, inspired by revolutionary ideals and by their own experiences and desires, slaves in the French colony of Saint-Domingue rose up, eventually forming the new nation of Haiti. (Pages 464–500, 532–538, 610–645)
CONCEPT 2.2
The Expansion of the European Economy

For most people in this period, life remained a struggle with poverty and uncertainty, with seldom enough good food, warm clothing, or decent housing despite hard work. Yet the economic basis of European life was beginning to change as the European economy responded to challenges and began to expand once again. Population resumed its growth, while colonial empires extended and developed. Some areas were more fortunate than others. The rising Atlantic powers — the Dutch Republic, France, and above all England — and their colonies led the way. New developments in agricultural technology and methods gradually increased the food supply and brought an end to the ravages of hunger in western Europe.

A rising rural population led to the growth of cottage industry, in which poor peasants and laborers manufactured goods for the market in a “putting-out” system organized by merchant capitalists. The growth of this market economy was further aided by new financial institutions that allowed investment at lower risk.

The expansion of agriculture, industry, and population in Europe was accompanied by an increase in world trade. Spain and Portugal revitalized their colonial empires and, together with the countries of northwestern Europe, created a fairly unified Atlantic economy that provided remarkable opportunities for them and their colonists. Mercantilist economic policies, aimed at creating favorable balances of foreign trade and increasing the power of the state, led to a series of wars as countries vied for influence. At the core of the Atlantic economy were the misery and profit of the Atlantic slave trade, in which millions of Africans were enslaved and shipped across the Atlantic to work in plantation agriculture producing consumer goods such as sugar, tobacco, and cotton. Commodities imported from abroad and new crops introduced from the Americas became dietary staples for people of all social classes in western Europe, contributing to a new consumer culture that made working people in Europe increasingly dependent on faraway colonial economies and enslaved labor.

(Pages 542–571)
CONCEPT 2.3
Reason, Progress, and the Emotions

In the seventeenth century fundamentally new ways of understanding the natural world emerged, as natural philosophers performed experiments and applied sophisticated mathematics in their search for precise knowledge of the physical world. In the eighteenth century philosophers extended the use of reason from the study of nature to the study of human society. They sought to bring the light of reason to bear on the darkness of prejudice, outmoded traditions, and ignorance, challenging traditional values, which were also being challenged by Europe’s increased contacts with the wider world. Self-proclaimed members of an “Enlightenment” movement, they wished to bring the same progress to human affairs that their predecessors had brought to the understanding of the natural world, and created concepts of human rights, equality, universalism, and tolerance.

At the same time, some people used their new understanding of nature and reason to proclaim their own superiority, thus rationalizing such attitudes as racism and sexism. A series of new institutions and practices encouraged the spread of enlightened ideas, including the increased production and consumption of books, conversational spaces such as salons and coffeehouses, and newspapers, all of which played a role in the creation of a “public sphere,” an idealized intellectual space in which the public came together to discuss important issues. Enlightenment ideals of progress, freedom, and the individual were applied to the economy by thinkers who advocated free trade and competition in what became known as economic liberalism, and to politics by thinkers who argued that sovereignty lies in the people, or at least the people who own property. Some Enlightenment thinkers challenged organized religion and Christian theology, and argued for religious toleration, a policy adopted by several European countries toward the end of the eighteenth century. For most people, however, religious faith remained important, and there were vigorous religious renewal movements in both Protestant and Catholic lands that emphasized the importance of the emotions, moral living, and individual piety.

In the early nineteenth century some writers, artists, and composers also broke with the Enlightenment emphasis on reason to create Romanticism, a movement characterized by emotional exuberance, unrestrained imagination, and a fascination with nature and the exotic. (Pages 513–538, 557–559, 596–601, 697–703)

CONCEPT 2.4
Population, Prosperity, and Poverty

Traditional habits and practices of daily life changed considerably over the eighteenth century as a result of population growth, economic expansion, and ferocious political competition at home and abroad. In the seventeenth century unusually cold and wet weather, disease, and war led to stable or declining population levels, but in the eighteenth century the population of Europe began to grow markedly, largely as the result of the disappearance of the plague, public health measures such as sewage systems, better transportation systems that lessened the impact of local crop failures, and nutritious new foods, such as the potato. In western Europe, people tended to delay marriage until they could start an independent household, but they then had a number of children
in rapid succession. Family and community pressure had controlled premarital sex in village society, and when young people migrated to cities in search of employment, the rate of births out of wedlock increased sharply. Child mortality generally remained high, but for those children who survived, new Enlightenment ideals stressed the importance of parental nurturing, and elementary education outside the home gradually became more available. This led to an increase in literacy, which promoted the development of popular literature, and individual reading became a pastime. Towns and cities offered a wide range of amusements to the many people who migrated there in search of work, including spectator sports, theaters, gardens, and cafés, as well as consumer goods from around the world, through which people increasingly derived their self-identities. Changes in outward appearance were reflected in inner spaces, as new attitudes toward privacy and intimate life also emerged, and people erected walls within homes to create rooms with specialized functions and personalized décor, set out individual plates for each person, and emphasized personal cleanliness and hygiene. The new consumer goods were not enjoyed by all, however. Many migrants to the cities remained poor, reliant on casual labor, prostitution, and crime to make ends meet, and subject to increasing surveillance and punishment, while poor rural residents — the vast majority of the European population — continued to eat, drink, wear, and use primarily products made locally, and not many of these. Absolutism and Constitutionalism
ca. 1589–1725

The seventeenth century was a period of crisis and transformation in Europe. Agricultural and manufacturing slumps led to food shortages and shrinking population rates. Religious and dynastic conflicts led to almost constant war, visiting violence and destruction on ordinary people and reshaping European states. With Louis XIV of France taking the lead, armies grew larger than they had been since the time of the Roman Empire, resulting in new government bureaucracies and higher taxes. Yet even with these obstacles, European states succeeded in gathering more power, and by 1680 much of the unrest that originated with the Reformation was resolved.

These crises were not limited to western Europe. Central and eastern Europe experienced even more catastrophic dislocation, with German lands serving as the battleground of the Thirty Years’ War and borders constantly vulnerable to attack from the east. In Prussia and in Habsburg Austria absolutist states emerged in the aftermath of this conflict. Russia and the Ottoman Turks also experienced turmoil in the mid-seventeenth century, but maintained their distinctive styles of absolutist government. The Russian and Ottoman Empires seemed foreign and exotic to western Europeans, who saw them as far removed from their political, religious, and cultural values.

While absolutism emerged as the solution to crisis in many European states, a small minority adopted a different path, placing sovereignty in the hands of privileged groups rather than the Crown. Historians refer to states where executive power was limited by law as “constitutional.” The two most important seventeenth-century constitutionalist states were England and the Dutch Republic. Constitutionalism should not be confused with democracy. The elite rulers of England and the Dutch Republic pursued the same policies as absolute monarchs: increased taxation, government authority, and social control. Nonetheless, they served as influential models to onlookers across Europe as forms of government that checked the power of a single ruler.
Seventeenth-Century Crisis and Rebuilding
What were the common crises and achievements of seventeenth-century European states?

Absolutism in France and Spain
What factors led to the rise of the French absolutist state under Louis XIV, and why did absolutist Spain experience decline in the same period?

Absolutism in Austria and Prussia
What were the social conditions of eastern Europe, and how did the rulers of Austria and Prussia transform their nations into powerful absolutist monarchies?

The Development of Russia and the Ottoman Empire
What were the distinctive features of Russian and Ottoman absolutism?

Constitutional Rule in England and the Dutch Republic
Why and how did the constitutional state triumph in the Dutch Republic and England?
Historians often refer to the seventeenth century as an “age of crisis,” when Europe was challenged by population losses, economic decline, and social and political unrest. These difficulties were partially due to climate changes that reduced agricultural productivity, but they also resulted from bitter religious divides, war, and increased governmental pressures. Peasants and the urban poor were hit especially hard by the economic problems, and they frequently rose in riot against high food prices.

The atmosphere of crisis encouraged governments to take emergency measures to restore order, measures that they successfully turned into long-term reforms that strengthened the power of the state. These included a spectacular growth in army size as well as increased taxation, the expansion of government bureaucracies, and the acquisition of land or maritime empires. In the long run, European states proved increasingly able to impose their will on the populace.

**The Social Order and Peasant Life**

Peasants occupied the lower tiers of a society organized in hierarchical levels. At the top, the monarch was celebrated as a semidivine being, chosen by God to embody the state. In Catholic countries, the clergy occupied the second level, due to their sacred role interceding with God and the saints on behalf of their flocks. Next came nobles, whose privileged status derived from their ancient bloodlines and centuries of leadership on the battlefield. Traditional Christian prejudices against commerce and money meant that merchants could never lay claim to the highest honors. However, many prosperous mercantile families had bought their way into the nobility through service to the rising monarchies of the fifteenth and sixteenth centuries and constituted a second tier of nobles. Those lower on the social scale, the peasants and artisans who constituted the vast majority of the population, were expected to defer to their betters with humble obedience. This was the “Great Chain of Being” that linked God to his creation in a series of ranked social groups.

In addition to being rigidly hierarchical, European societies were patriarchal in nature, with men assuming authority over women as a God-given prerogative. The family thus represented a microcosm of the social order. The father ruled his family like a king ruled his domains. Religious and secular law commanded a man’s wife, children, servants, and apprentices to defer to his will. Fathers did not possess the power of life and death, like Roman patriarchs, but they were entitled to use physical violence, imprisonment, and other forceful measures to impose their authority. These powers were balanced by expectations that a good father would provide and care for his dependents.

In the seventeenth century most Europeans lived in the countryside. The hub of the rural world was the small peasant village centered on a church and a manor. Life was in many ways circumscribed by the village.
although we should not underestimate the mobility induced by war, food shortage, and the desire to seek one's fortune or embark on religious pilgrimage.

In western Europe, a small number of peasants in each village owned enough land to feed themselves and had the livestock and plows necessary to work their land. These independent farmers were leaders of the peasant village. They employed the landless poor, rented out livestock and tools, and served as agents for the noble lord. Below them were small landowners and tenant farmers who did not have enough land to be self-sufficient. These families sold their best produce on the market to earn cash for taxes, rent, and food. At the bottom were villagers who worked as dependent laborers and servants. In eastern Europe, the vast majority of peasants toiled as serfs for noble landowners and did not own land in their own right (see page 481).

Rich or poor, east or west, bread was the primary element of the diet. The richest ate a white loaf, leaving brown bread to those who could not afford better. Peasants paid stiff fees to the local miller for grinding grain into flour and sometimes to the lord for the right to bake bread in his oven. Bread was most often accompanied by a soup made of roots, herbs, beans, and perhaps a small piece of salt pork. An important annual festival in many villages was the killing of the family pig. The whole family gathered to help, sharing a rare abundance of meat with neighbors and carefully salting the extra and putting down the lard. In some areas, menstruating women were careful to stay away from the kitchen because of superstitious fears that they would cause the lard to spoil.

### Famine and Economic Crisis

European rural society lived on the edge of subsistence. Because of the crude technology and low crop yield, peasants were constantly threatened by scarcity and famine. In the seventeenth century a period of colder and wetter climate throughout Europe, dubbed the “little ice age” by historians, meant a shorter farming season with lower yields. A bad harvest created food shortages; a series of bad harvests could lead to famine. Recurrent famines significantly reduced the population of early modern Europe. Most people did not die of outright starvation but perished through the spread of diseases like smallpox and typhoid, which were facilitated by malnutrition and exhaustion. Outbreaks of bubonic plague continued in Europe until the 1720s.

The Estates of Normandy, a provincial assembly, reported on the dire conditions in northern France during an outbreak of plague:

Of the 450 sick persons whom the inhabitants were unable to relieve, 200 were turned out, and these we saw die one by one as they lay on the roadside. A large number still remain, and to each of them it is only possible to dole out the least scrap of bread. We only give bread to those who would otherwise die. The staple dish here consists of mice, which the inhabitants hunt, so desperate are they from hunger. They devour roots which the animals cannot eat; one can, in fact, not put into words the things one sees. . . . We certify to having ourselves seen herds, not of cattle, but of men and women, wandering about the fields between Rheims and Rhétel, turning up the earth like pigs to find a few roots; and as they can only find rotten ones, and not half enough of them, they become so weak that they have not strength left to seek food.
Industry also suffered. The output of woolen textiles, one of the most important European manufactures, declined sharply in the first half of the seventeenth century. Food prices were high, wages stagnated, and unemployment soared. This economic crisis was not universal: it struck various regions at different times and to different degrees. In the middle decades of the century, for example, Spain, France, Germany, and England all experienced great economic difficulties, but these years were the golden age of the Netherlands.

The urban poor and peasants were the hardest hit. When the price of bread rose beyond their capacity to pay, they frequently expressed their anger by rioting. In towns they invaded bakers’ shops to seize bread and resell it at a “just price.” In rural areas they attacked convoys taking grain to the cities. Women often led these actions, since their role as mothers gave them some impunity in authorities’ eyes. Historians have used the term “moral economy” for this vision of a world in which community needs predominate over competition and profit.

The Thirty Years’ War

Harsh economic conditions in the seventeenth century were greatly exacerbated by the decades-long conflict known as the Thirty Years’ War (1618–1648). The Holy Roman Empire was a confederation of hundreds of principalities, independent cities, duchies, and other polities loosely united under an elected emperor. The uneasy truce between Catholics and Protestants created by the Peace of Augsburg in 1555 deteriorated as the faiths of various areas shifted. Lutheran princes felt compelled to form the Protestant Union (1608), and Catholics retaliated with the Catholic League (1609). Each alliance was determined that the other should make no religious or territorial advance. Dynastic interests were also involved; the Spanish Habsburgs strongly supported the goals of their Austrian relatives: the unity of the empire and the preservation of Catholicism within it.

The war is traditionally divided into four phases. The first, or Bohemian, phase (1618–1625) was characterized by civil war in Bohemia between the Catholic League and the Protestant Union. In 1620 Catholic forces defeated Protestants at the Battle of the White Mountain. The second, or Danish, phase of the war (1625–1629) — so called because of the leadership of the Protestant king Christian IV of Denmark (r. 1588–1648) — witnessed additional Catholic victories. The Catholic imperial army led by Albert of Wallenstein swept through Silesia, north to the Baltic, and east into Pomerania, scoring smashing victories. Under Charles I, England briefly and unsuccessfully intervened in this phase of the conflict by entering alliances against France and Spain. Habsburg power peaked in 1629. The emperor issued the Edict of Restitution, whereby all Catholic properties lost to Protestantism since 1552 were restored, and only Catholics and Lutherans were allowed to practice their faiths.

The third, or Swedish, phase of the war (1630–1635) began with the arrival in Germany of the Swedish king Gustavus Adolphus (r. 1594–1632) and his army. The ablest administrator of his day and a devout Lutheran, he intervened to support the empire’s Protestants. The French chief minister, Cardinal Richelieu, subsidized the Swedes, hoping to weaken Habsburg power in Europe. Gustavus Adolphus won two important battles but was fatally wounded in combat. The final, or French, phase of the war (1635–1648) was prompted by Richelieu’s concern that the Habsburgs would rebound after the death of Gustavus Adolphus. Richelieu declared war on Spain and sent military as well as financial assistance. Finally, in October 1648 peace was achieved.

The 1648 Peace of Westphalia that ended the Thirty Years’ War marked a turning point in European history. For the most part, conflicts fought over religious faith receded. The treaties recognized the independent authority of more than three hundred German princes (Map 15.1), reconfirming the emperor’s severely limited authority. The Augsburg agreement of 1555 became permanent, adding Calvinism to Catholicism and Lutheranism as legally permissible creeds. The north German states remained Protestant, the south German states Catholic.

The Thirty Years’ War was the most destructive event for the central European economy and society prior to the world wars of the twentieth century. Perhaps one-third of urban residents and two-fifths of the rural population died, leaving entire areas depopulated. Trade in southern German cities, such as Augsburg, was virtually destroyed. Agricultural areas suffered catastrophically. Many small farmers lost their land, allowing nobles to enlarge their estates and consolidate their control.²

Achievements in State-Building

In the context of warfare, economic crisis, and demographic decline, seventeenth-century monarchs took urgent measures to restore order and rebuild their states. Traditionally, historians have distinguished between the absolutist governments of France, Spain, central Europe, and Russia and the constitutionalist governments of England and the Dutch Republic. Whereas absolutist monarchs gathered all power under their personal control, English and Dutch rulers were obliged to respect laws passed by representative institutions. More recently, historians have emphasized commonalities among these powers. Despite their political differences, all these
states shared common projects of protecting and expanding their frontiers, raising new taxes, consolidating central control, and competing for the new colonies opening up in the New and Old Worlds. In so doing, they followed a broad pattern of state-building and consolidation of power found across Eurasia in this period.

Rulers encountered formidable obstacles in achieving these goals. Without paved roads, telephones, or other modern technology, it took weeks to convey orders from the central government to the provinces and even longer to distant colonies. Rulers also suffered from lack of reliable information about their realms, making it impossible to police and tax the population effectively. Local power structures presented another serious obstacle. Nobles, the church, provincial and national assemblies, town councils, guilds, and other bodies held legal privileges, which could not easily be rescinded. Many kingdoms were composed of groups of people of different ethnicities who spoke a language different from that of the ruling dynasty, which further diminished their willingness to obey.

Nonetheless, over the course of the seventeenth century both absolutist and constitutional governments achieved new levels of power and national unity.
They did so by transforming emergency measures of wartime into permanent structures of government and by subduing privileged groups through the use of force and through economic and social incentives. Increased state authority may be seen in four areas in particular: greater taxation, growth in armed forces, larger and more efficient bureaucracies, and territorial expansion both within Europe and overseas.

Over time, centralized power added up to something close to sovereignty. A state may be termed sovereign when it possesses a monopoly over the instruments of justice and the use of force within clearly defined boundaries. In a sovereign state, no system of courts, such as church tribunals, competes with state courts in the dispensation of justice; and private armies, such as those of feudal lords, present no threat to central authority. While seventeenth-century states did not acquire total sovereignty, they made important strides toward that goal.

**Warfare and the Growth of Army Size**

The driving force of seventeenth-century state-building was warfare. In medieval times, feudal lords had raised armies only for particular wars or campaigns; now monarchs began to recruit their own forces and maintain permanent standing armies. Instead of serving their own interests, army officers were required to be loyal and obedient to state officials. New techniques for training and deploying soldiers meant a rise in the professional standards of the army.

Along with professionalization came an explosive growth in army size. The French took the lead, with the army growing from roughly 125,000 men in the Thirty Years’ War to 340,000 at the end of the seventeenth century. Changes in the style of armies encouraged this growth. Musterling a royal army took longer than simply hiring a mercenary band, giving enemies time to form coalitions. For example, the large coalitions Louis XIV confronted (see pages 478–479) required him to fight on multiple fronts with huge armies. In turn, the relative size and wealth of France among European nations allowed Louis to field enormous armies and thereby to pursue the ambitious foreign policies that caused his alarmed neighbors to form coalitions against him.

Noble values of glory and honor outshone concerns for safety or material benefit. Because they personally led their men in battle, noble officers experienced high death rates on the battlefield. Nobles also fell into debt because they had to purchase their positions in the army and the units they commanded, which meant that they were obliged to assume many of the costs involved in creating and maintaining their units. It was not until the 1760s that the French government assumed the full cost of equipping troops.

**The Professionalization of the Swedish Army**

Swedish king Gustavus Adolphus, surrounded by his generals, gives thanks to God for the safe arrival of his troops in Germany during the Thirty Years’ War. A renowned military leader, the king imposed constant training drills and rigorous discipline on his troops, which contributed to their remarkable success in the war. (Military Academy of Karlberg)
Other European powers were quick to follow the French example. The rise of absolutism in central and eastern Europe was thus accompanied by a vast expansion in the size of armies. Great Britain followed a similar, albeit distinctive pattern. Instead of building a land army, the island nation focused on naval forces and eventually built the largest navy in the world.

Popular Political Action

As governments continuously raised taxes to meet the costs of war, neighborhood riots over the cost of bread turned into armed uprisings. Popular revolts were extremely common in England, France, Spain, Portugal, and Italy during the Thirty Years’ War. In 1640 Philip IV of Spain faced revolt in Catalonia, the economic center of his realm. At the same time he struggled to put down uprisings in Portugal and in the northern provinces of the Netherlands. In 1647 the city of Palermo, in Spanish-occupied Sicily, exploded in protest over food shortages caused by a series of bad harvests. Fearing public unrest, the city government subsidized the price of bread, attracting even more starving peasants from the countryside. When Madrid ordered an end to subsidies, municipal leaders decided to lighten the loaf rather than raise prices. Not fooled by this change, local women led a bread riot, shouting “Long live the king and down with the taxes and the bad government!” Insurgency spread to the rest of the island and eventually to Naples on the mainland. Apart from affordable food, rebels demanded the suppression of extraordinary taxes and participation in municipal government. Some dreamed of a republic that would abolish noble tax exemptions. Despite initial successes, the revolt lacked unity and strong leadership and could not withstand the forces of the state.

In France urban uprisings became a frequent aspect of the social and political landscape. Beginning in 1630 and continuing intermittently through the early 1700s, major insurrections occurred at Dijon, Bordeaux (bor-DOH), Montpellier, Lyons, and Amiens. All were characterized by deep popular anger and violence directed at outside officials sent to collect taxes. These officials were sometimes seized, beaten, and hacked to death. For example, in 1673 Louis XIV’s imposition of new taxes on legal transactions, tobacco, and pewter ware provoked an uprising in Bordeaux.

Municipal and royal authorities often struggled to overcome popular revolt. They feared that stern repressive measures, such as sending in troops to fire on crowds, would create martyrs and further inflame the situation, while full-scale occupation of a city would be very expensive and detract from military efforts elsewhere. The limitations of royal authority gave some leverage to rebels. To quell riots, royal edicts were sometimes suspended, prisoners released, and discussions initiated.

By the beginning of the eighteenth century this leverage had largely disappeared. Municipal governments were better integrated into the national structure, and local authorities had prompt military support from the central government. People who publicly opposed royal policies and taxes received swift and severe punishment.

Absolutism in France and Spain

FOCUS QUESTION What factors led to the rise of the French absolutist state under Louis XIV, and why did absolutist Spain experience decline in the same period?

In the Middle Ages jurists held that as a consequence of monarchs’ coronation and anointment with sacred oil, they ruled “by the grace of God.” Law was given by God; kings “found” the law and acknowledged that they must respect and obey it. Kings in absolutist states amplified these claims, asserting that they were responsible to God alone. They claimed exclusive power to make and enforce laws, denying any other institution or group the authority to check their power. In France the founder of the Bourbon monarchy, Henry IV, established foundations upon which his successors Louis XIII and Louis XIV built a stronger, more centralized French state. Louis XIV is often seen as the epitome of an “absolute” monarch, with his endless wars, increased taxes and economic regulation, and glorious palace at Versailles. In truth, his success relied on collaboration with nobles, and thus his example illustrates both the achievements and the compromises of absolutist rule.

As French power rose in the seventeenth century, the glory of Spain faded. Once the fabulous revenue from American silver declined, Spain’s economic stagnation could no longer be disguised, and the country faltered under weak leadership.

The Foundations of French Absolutism

At the beginning of the seventeenth century France’s position appeared extremely weak. Struggling to recover from decades of religious civil war, France posed little threat to Spain’s predominance in Europe. Yet by the end of the century the countries’ positions were reversed.

Henry IV (r. 1589–1610) inaugurated a remarkable recovery by defusing religious tensions and rebuilding France’s economy. He issued the Edict of Nantes, allowing...
THINKING LIKE A HISTORIAN

What Was Absolutism?

Historians have long debated the nature of “absolutism” in seventeenth-century Europe. While many historians have emphasized the growth of state power in this period, especially under Louis XIV of France, others have questioned whether such a thing as “absolutism” ever existed. The following documents will allow you to draw your own conclusions about absolutism.

Jacques-Bénigne Bossuet, political treatise, 1709. In 1670 Louis XIV appointed Bishop Bossuet tutor to his son and heir, known as the dauphin. In Politics Drawn from the Very Words of Holy Scripture, Bossuet argued that royal power was divine and absolute, but not without limits.

“It appears from all this that the person of the king is sacred, and that to attack him in any way is sacrilege. God has the kings anointed by his prophets with the holy unction in like manner as he has bishops and altars anointed. But even without the external application in thus being anointed, they are by their very office the representatives of the divine majesty deputed by Providence for the execution of his purposes. Accordingly God calls Cyrus his anointed. “Thus saith the Lord to his anointed, to Cyrus, whose right hand I have holden, to subdue nations before him.” Kings should be guarded as holy things, and whosoever neglects to protect them is worthy of death. …There is something religious in the respect accorded to a prince. The service of God and the respect for kings are bound together. St. Peter unites these two duties when he says, “Fear God. Honour the king.” …But kings, although their power comes from on high, as has been said, should not regard themselves as masters of that power to use it at their pleasure; …they must employ it with fear and self-restraint, as a thing coming from God and of which God will demand an account.

Letter of the prince of Condé, royal governor of the province of Burgundy, to Controller General Jean-Baptiste Colbert, June 18, 1662. In this letter, the king’s representative in the province of Burgundy reports on his efforts to compel the leaders of the province to pay taxes levied by the royal government. The Estates of Burgundy comprised representatives of the three orders, or estates, of society: the clergy, the nobility, and the commoners.

“Since then the Estates have deliberated every day, persuaded that the extreme misery in this province — caused by the great levies it has suffered, the sterility [of the land] in recent years, and the disorders that have recently occurred —would induce the king to give them some relief. That is why they offered only 500,000 for the free gift. Then, after I had protested this in the appropriate manner, they raised it to 600,000, then 800,000, and finally 900,000 livres. Until then I had stood firm at 1.5 million, but when I saw that they were on the verge of deciding not to give any more … I finally came down to the 1.2 million livres contained in my instructions and invited them to deliberate again, declaring that I could not agree to present any other proposition to the king and that I believed that there was no better way to serve their interests than to obey the king blindly. They agreed with good grace and came this morning to offer me a million. They begged me to leave it at that and not to demand more from them for the free gift; and since I told them they would have to do a little better to satisfy the king completely on this occasion, they again exaggerated their poverty and begged me to inform the king of it, but said that, rather than not please him, they preferred to make a new effort, and they would leave it up to me to declare what they had to do. I told them that I believed His Majesty would have the goodness to be satisfied with 1.05 million livres for the free gift, and they agreed … So Monsieur, there is the deed done.

ANALYZING THE EVIDENCE

1. What elements of royal authority does the portrait of Louis XIV in Source 4 present to viewers? How would you compare this depiction of political power with images from modern-day politicians? How would you explain the differences?

2. What justification do the sources offer for Louis’s claim to exercise “absolute” political authority? Based on his own words in Source 3, how do you think Louis would have viewed the constitutional governments of England and the Dutch Republic?

3. Compare and contrast the evidence for Louis’s power given in these sources with evidence for limitations on it. What resources would a king have to muster to enlarge his army drastically (Source 5)? What insight do the negotiations over taxation (Source 2) give you into the ways the royal government acquired those resources?
So state of fermentation.

Those of corporate bodies, it always is there in a it be detached into the hands of individuals or the Sovereign. The least division in this respect of demand that he should cause himself to be indispensably obeyed; for it must be acknowledged there is nothing can so securely establish the happiness and tranquility of a country as the perfect combination of all authority in the single person of the Sovereign. The least division in this respect often produces the greatest calamities; and whether it be detached into the hands of individuals or those of corporate bodies, it always is there in a state of fermentation.

...[B]esides the insurrections and the intestine commotions which the ambition of power infallibly produces when it is not repressed, there are still a thousand other evils created by the inactivity of the Sovereign. Those who are nearest his person are the first to observe his weakness, and are also the first who are desirous of profiting by it. Every one of those persons have necessarily others who are subservient to their avaricious views, and to whom they at the same time give the privilege of imitating them. Thus, from the highest to the lowest is a systematic corruption communicated, and it becomes general in all classes.

Hyacinthe Rigaud, portrait of Louis XIV, 1701. This was one of Louis XIV’s favorite portraits of himself. He liked it so much that he had many copies of the portrait made; his successors had their own portraits painted in the same posture with the same clothing and accoutrements.

PUTTING IT ALL TOGETHER

Using the sources above, along with what you have learned in class and in this chapter, what was “absolutism”? Write a brief essay explaining what contemporaries thought absolute power entailed and the extent to which Louis XIV achieved such power.

Huguenots (French Protestants) the right to worship in 150 traditionally Protestant towns throughout France. He built new roads and canals to repair the ravages of years of civil war and raised revenue by selling royal offices instead of charging high taxes. Despite his efforts at peace, Henry was murdered in 1610 by a Catholic zealot.

Cardinal Richelieu (1585–1642) became first minister of the French crown on behalf of Henry's young son, Louis XIII (r. 1610–1643). Richelieu's domestic policies were designed to strengthen royal control. He acted to repress Protestantism, which he viewed as a divisive force in the realm. He also extended the use of intendants, commissioners for each of France's thirty-two districts who were appointed directly by the monarch, to whom they were solely responsible. These officials recruited men for the army, supervised tax collection, presided over the administration of local law, checked up on the local nobility, and regulated economic activities in their districts. As the intendants' power increased under Richelieu, so did the power of the centralized French state.

Richelieu's main foreign policy goal was to destroy the Habsburgs' grip on territories that surrounded France. Consequently, Richelieu supported Habsburg enemies, including Protestants during the Thirty Years' War (see page 468). For the French cardinal, interests of state outweighed religious considerations.

Cardinal Jules Mazarin (1602–1661) succeeded Richelieu as chief minister for the next child-king, the four-year-old Louis XIV, who inherited the throne from his father in 1643. Along with the regent, Queen Mother Anne of Austria, Mazarin continued Richelieu's centralizing policies. His struggle to increase royal revenues to meet the costs of war led to the uprisings of 1648–1653 known as the Fronde. In Paris, magistrates of the Parlement of Paris, the nation's most important law court, were outraged by the Crown's autocratic measures. These so-called robe nobles (named for the robes they wore in court) encouraged violent protest by the common people. As rebellion spread outside Paris and to the sword nobles (the traditional warrior nobility), civil order broke down completely, and young Louis XIV had to flee Paris for his safety.

Much of the rebellion died away, however, when Louis XIV was declared king in his own right in 1651, ending the regency of his mother Anne of Austria. (French law prohibited a woman from inheriting the throne, so periods when a queen mother acted as regent for a child-king were always vulnerable moments.) The French people were desperate for peace and stability after the disorders of the Fronde and were willing to accept a strong monarch who could reimpose order. Louis pledged to do just that when he assumed personal rule of his realm at Mazarin's death in 1661.

**Louis XIV and Absolutism**

In the reign of Louis XIV (r. 1643–1715), the longest in European history, the French monarchy reached the peak of absolutist development. Louis believed in the doctrine of the divine right of kings: God had established kings as his rulers on earth, and they were answerable ultimately to him alone. To symbolize his central role in the divine order, when he was fifteen years old Louis danced at a court ballet dressed as the sun, thereby acquiring the title “Sun King.”

In addition to parading his power before the court, Louis worked very hard at the business of governing. He ruled his realm through several councils of state and insisted on taking a personal role in many of their decisions. He selected councilors from the recently ennobled or the upper middle class and offered this explanation: “[T]he public should know, from the rank of those whom I chose to serve me, that I had no intention of sharing power with them.” Despite increasing financial problems, Louis never called a meeting of the Estates General, thereby depriving nobles of united expression or action. Nor did Louis have a first minister. In this way he avoided the inordinate power of a Richelieu.

Although personally tolerant, Louis hated division within the realm and insisted that religious unity was essential to his royal dignity and to the security of the state. He thus pursued the policy of Protestant represion launched by Richelieu. In 1685 Louis revoked the Edict of Nantes. The new law ordered the Catholic baptism of Huguenots (French Calvinists), the destruction of Huguenot churches, the closing of schools, and the exile of Huguenot pastors who refused to renounce their faith. Around two hundred thousand Protestants, including some of the king’s most highly skilled artisans, fled into exile.

Despite his claims to absolute authority, multiple constraints existed on Louis’s power. As a representative of divine power, he was obliged to rule in a manner consistent with virtue and benevolence. (See “Thinking Like a Historian: What Was Absolutism?” page 472.) He had to uphold the laws issued by his royal predecessors. Moreover, he also relied on the collaboration of nobles, who maintained tremendous prestige and authority in their ancestral lands. Without their cooperation, it would have been impossible to extend his power throughout France or wage his many foreign wars. Louis’s efforts to elicit noble cooperation can be witnessed in the court life he created at his spectacular palace at Versailles.

**Life at Versailles**

Through most of the seventeenth century the French court had no fixed home, following the monarch to his
Letter from Versailles

**Born in 1652, the German princess Elisabeth-Charlotte was the daughter of the elector of the Palatinate, one of the many small states of the Holy Roman Empire. In 1671 she married the duke of Orléans, brother of Louis XIV. When Louis’s wife died in 1683, Elisabeth-Charlotte became the highest-ranked woman at the French court. Despite the considerable pride she took in her position, her correspondence reveals her unhappiness and boredom with court life and her longing for home, as shown in the letter to her sister excerpted below.**

I have nothing new to tell you; I walk and read and write; sometimes the king drives me to the hunt in his calèche. There are hunts every day; Sundays and Wednesdays are my son’s days; the king hunts Mondays and Thursdays; Wednesdays and Saturdays Monseigneur [heir to the throne] hunts the wolf; M. le Comte de Toulouse, Mondays and Wednesdays; the Duc du Maine, Tuesdays; and M. le Duc, Fridays. They say if all the hunting kennels were united there would be from 900 to 1000 dogs. Twice a week there is a comedy. But you know, of course, that I go nowhere [due to mourning for her recently deceased husband]; which vexes me, for I must own that the theatre is the greatest amusement I have in the world, and the only pleasure that remains to me. . . .

If the Court of France was what it used to be one might learn here how to behave in society; but — excepting the king and Monsieur [the king’s brother, her deceased husband] — no one any longer knows what politeness is.

---

The young men think only of horrible debauchery. I do not advise any one to send their children here; for instead of learning good things, they will only take lessons in misconduct. You are right in blaming Germans who send their sons to France; how I wish that you and I were men and could go to the wars! — but that’s a completely useless wish to have. . . . If I could with propriety return to Germany you would see me there quickly. I love that country; I think it more agreeable than all others, because there is less of luxury that I do not care for, and more of the frankness and integrity which I seek. But, be it said between ourselves, I was placed here against my will, and here I must stay till I die. There is no likelihood that we shall see each other again in this life; and what will become of us after that God only knows.

---

**EVALUATE THE EVIDENCE**

1. What are the principal amusements of court life, according to Elisabeth-Charlotte? What comparison does she draw between life in Germany and France?

2. How does the image of Versailles conveyed by Elisabeth-Charlotte contrast with the images of the palace found elsewhere in this chapter? How do you explain this contrast? If courtiers like her found life so dreary at court, why would they stay?

By 1700 palace building had become a veritable obsession for European rulers. Their dramatic palaces symbolized the age of absolutist power, just as soaring Gothic cathedrals had expressed the idealized spirit of the High Middle Ages. With its classically harmonious, symmetrical, and geometric design, Versailles served as the model for the wave of palace building that began in the last decade of the seventeenth century. Royal palaces like Versailles were intended to awe the people and proclaim their owners’ authority and power.

Located ten miles southwest of Paris, Versailles began as a modest hunting lodge built by Louis XIII in 1623. His son Louis XIV spent decades enlarging and decorating the original structure. Between 1668 and 1670 architect Louis Le Vau (lüh VÖ) enveloped the old building within a much larger one that still exists today. In 1682 the new palace became the official residence of the Sun King and his court, although construction continued until 1710, when the royal chapel was completed. At any one time, several thousand people occupied the bustling and crowded palace. The awesome splendor of the eighty-yard Hall of Mirrors, replete with floor-to-ceiling mirrors and ceiling murals illustrating the king’s triumphs, contrasted with the strong odors from the courtiers who commonly relieved themselves in discreet corners.

In 1693 Charles XI of Sweden, having reduced the power of the aristocracy, ordered the construction of his Royal Palace, which dominates the center of Stockholm to this day. Another such palace was Schönbrunn, an enormous Viennese Versailles begun in 1695 by Emperor Leopold to celebrate Austrian military victories and Habsburg might. Shown at lower right is architect JosephBernhard Fischer von Erlach’s ambitious plan for Schönbrunn palace. Fischer’s plan emphasizes the palace’s vast size and its role as a site for military demonstrations. Ultimately, financial constraints resulted in a more modest building.

In central and eastern Europe the favorite noble servants of royalty became extremely rich and powerful, and they, too, built grandiose palaces in the capital cities. These palaces were in part an extension of the monarch, for they surpassed the buildings of less-favored nobles and showed all the high road to fame and fortune. Take, for example, the palaces of Prince Eugene of Savoy, a French nobleman who became Austria’s most famous military hero. It was Eugene who led the Austrian army, smashed the Turks, fought Louis XIV to a standstill, and generally guided the triumph of absolutism in Austria. Rewarded with

Prince Eugene’s Summer Palace in Vienna. (Erich Lessing/Art Resource, NY)

and privileges; access to him meant favored treatment for government offices, military and religious posts, state pensions, honorary titles, and a host of other benefits. Courtiers sought these rewards for themselves and their family members and followers. A system of patronage—in which a higher-ranked individual protected a lower-ranked one in return for loyalty and services—flowed from the court to the provinces. Through this mechanism Louis gained cooperation from powerful nobles.

Although they could not hold public offices or posts, women played a central role in the patronage system. At court the king’s wife, mistresses, and other female relatives recommended individuals for honors,
great wealth by his grateful king, Eugene called on the leading architects of the day, Fischer von Erlach and Johann Lukas von Hildebrandt, to consecrate his glory in stone and fresco. Fischer built Eugene’s Winter (or Town) Palace in Vienna, and he and Hildebrandt collaborated on the prince’s Summer Palace on the city’s outskirts. The prince’s summer residence featured two baroque gems, the Lower Belvedere and the Upper Belvedere, completed in 1722 and shown at left. The building’s interior is equally stunning, with crouching giants serving as pillars and a magnificent great staircase.

QUESTIONS FOR ANALYSIS
1. Compare these images. What did concrete objects and the manipulation of space accomplish for these rulers that mere words could not?
2. What disadvantages might stem from using architecture as a political tool?
3. Is the use of space and monumental architecture still a political tool in today’s world?

advocated policy decisions, and brokered alliances between factions. Noblewomen played a similar role, bringing their family connections to marriage to form powerful social networks. Onlookers sometimes resented the influence of powerful women at court. The duke of Saint-Simon said of Madame de Maintenon, Louis XIV’s mistress and secret second wife, “Many people have been ruined by her, without having been able to discover the author of the ruin, search as they might.”

Louis XIV was also an enthusiastic patron of the arts, commissioning many sculptures and paintings for Versailles as well as performances of dance and music. Scholars characterize the art and literature of the age of
Louis XIV as French classicism. By this they mean that the artists and writers of the late seventeenth century imitated the subject matter and style of classical antiquity, that their work resembled that of Renaissance Italy, and that French art possessed the classical qualities of discipline, balance, and restraint. Louis XIV also loved the stage, and in the plays of Molière and Racine his court witnessed the finest achievements in the history of French theater. In this period aristocratic ladies wrote many genres of literature and held salons in their Parisian mansions where they engaged in witty and cultured discussions of poetry, art, theater, and the latest worldly events. Their refined conversational style led Molière and other observers to mock them as “précieuses” (PREH-see-ooz; literally “precious”), or affected and pretentious. Despite this mockery, the précieuses represented an important cultural force ruled by elite women.

With Versailles as the center of European politics, French culture grew in international prestige. French became the language of polite society and international diplomacy, gradually replacing Latin as the language of scholarship and learning. Royal courts across Europe spoke French, and the great aristocrats of Russia, Sweden, Germany, and elsewhere were often more fluent in French than in the tongues of their homelands. France inspired a cosmopolitan European culture in the late seventeenth century that looked to Versailles as its center.

The French Economic Policy of Mercantilism

France’s ability to build armies and fight wars depended on a strong economy. Fortunately for Louis, his controller general, Jean-Baptiste Colbert (1619–1683), proved to be a financial genius. Colbert’s central principle was that the wealth and the economy of France should serve the state. To this end, from 1665 to his death in 1683, Colbert rigorously applied mercantilist policies to France.

Mercantilism is a collection of governmental policies for the regulation of economic activities by and for the state. It derives from the idea that a nation’s international power is based on its wealth, specifically its supply of gold and silver. To accumulate wealth, a country always had to sell more goods abroad than it bought. To decrease French purchases of goods from outside the country, Colbert insisted that French industry should produce everything needed by the French people.

To increase exports, Colbert supported old industries and created new ones, focusing especially on textiles, which were the most important sector of manufacturing. Colbert enacted new production regulations, created guilds to boost quality standards, and encouraged foreign craftsmen to immigrate to France. To encourage the purchase of French goods, he abolished many domestic tariffs and raised tariffs on foreign products. In 1664 Colbert founded the Company of the East Indies with (unfulfilled) hopes of competing with the Dutch for Asian trade.

Colbert also hoped to make Canada—rich in untapped minerals and some of the best agricultural land in the world — part of a vast French empire. He sent four thousand colonists to Quebec, whose capital had been founded in 1608 under Henry IV. Subsequently, the Jesuit Jacques Marquette and the merchant Louis Joliet sailed down the Mississippi River, which they named Colbert in honor of their sponsor (the name soon reverted to the original Native American one). Marquette and Joliet claimed possession of the land on both sides of the river as far south as present-day Arkansas. In 1684 French explorers continued down the Mississippi to its mouth and claimed vast territories for Louis XIV. The area was called, naturally, “Louisiana.”

During Colbert’s tenure as controller general, Louis was able to pursue his goals without massive tax increases and without creating a stream of new offices. The constant pressure of warfare after Colbert’s death, however, undid many of his economic achievements.

Louis XIV’s Wars

Louis XIV wrote that “the character of a conqueror is regarded as the noblest and highest of titles.” In pursuit of this conqueror, he kept France at war for thirty-three of the fifty-four years of his personal rule. François le Tellier, marquis de Louvois, Louis’s secretary of state for war, equaled Colbert’s achievements in the economic realm. Louvois created a professional army in which the French state, rather than private nobles, employed the soldiers. Uniforms and weapons were standardized, and a rational system of training and promotion was devised. Many historians believe that the new loyalty, professionalism, and growth of the French army represented the peak of Louis’s success in reforming government. As in so many other matters, his model was followed across Europe.

Louis’s goal was to expand France to what he considered its natural borders. His armies managed to extend French borders to include...
military. Yet by the end of the century their positions

destroyed its infrastructure and economy, France could

The Decline of Absolutist Spain
in the Seventeenth Century

The Peace of Utrecht represented the balance-of-

power principle in operation, setting limits on the extent
to which any one power—in this case, France—could expand. It also marked the end of French expansion. Thirty-five years of war had given France the rights to all of Alsace and some commercial centers in the north. But at what price? In 1714 an exhausted France hovered on the brink of bankruptcy. It is no wonder that when Louis XIV died on September 1, 1715, many subjects felt as much relief as they did sorrow.

were reversed, and France had surpassed all expecta-
tions to attain European dominance.

By the early seventeenth century the seeds of Spanish disaster were sprouting. Between 1610 and 1650 Spanish trade with the colonies in the New World fell 60 percent due to competition from local industries in the colonies and from Dutch and English traders. At the same time, the native Indian and African slaves who toiled in the South American silver mines suffered frightful epidemics of disease. Ultimately, the mines that filled the empire's treasury started to run dry, and the quantity of metal produced steadily declined after 1620.

In Madrid, however, royal expenditures constantly exceeded income. To meet mountainous state debt, the

MAP 15.2 Europe After the Peace of Utrecht, 1715

The series of treaties commonly called the Peace of Utrecht ended the War of the Spanish Succession and redrew the map of Europe. A French Bourbon king succeeded to the Spanish throne. France surrendered the Spanish Netherlands (later Belgium), then in French hands, to Austria, and recognized the Hohenzollern rulers of Prussia. Spain ceded Gibraltar to Great Britain, for which it has been a strategic naval station ever since. Spain also granted Britain the asiento, the contract for supplying African slaves to the Americas.

**ANALYZING THE MAP** Identify the areas on the map that changed hands as a result of the Peace of Utrecht. How did these changes affect the balance of power in Europe?

**CONNECTIONS** How and why did so many European countries possess scattered or noncontiguous territories? What does this suggest about European politics in this period? Does this map suggest potential for future conflict?

Crown repeatedly devalued the coinage and declared bankruptcy, which resulted in the collapse of national credit. Meanwhile, manufacturing and commerce shrank. In contrast to the other countries of western Europe, Spain had a tiny middle class. The elite condemned moneymaking as vulgar and undignified. Thousands entered economically unproductive professions; there were said to be nine thousand monasteries in the province of Castile alone. To make matters worse, the Crown expelled some three hundred thousand Moriscos, or former Muslims, in 1609, significantly reducing the pool of skilled workers and merchants. Those working in the textile industry were forced out of business by steep inflation that pushed their production costs to the point where they could not compete in colonial and international markets.

Spanish aristocrats, attempting to maintain an extravagant lifestyle they could no longer afford, increased the rents on their estates. High rents and heavy taxes in turn drove the peasants from the land, leading
to a decline in agricultural productivity. In cities wages and production stagnated. Spain also ignored new scientific methods that might have improved agricultural or manufacturing techniques because they came from the heretical nations of Holland and England.

The Spanish crown had no solutions to these dire problems. Philip III (r. 1598–1621), a melancholy and deeply pious man, handed the running of the government over to the duke of Lerma, who used it to advance his personal and familial wealth. Philip IV (r. 1621–1665) left the management of his several kingdoms to Gaspar de Guzmán, Count-Duke of Olivares. Olivares was an able administrator who has often been compared to Richelieu. He did not lack energy and ideas, and he succeeded in devising new sources of revenue. But he clung to the grandiose belief that the solution to Spain’s difficulties rested in a return to the imperial tradition of the sixteenth century. Unfortunately, the imperial tradition demanded the revival of war with the Dutch at the expiration of a twelve-year truce in 1622 and a long war with France over Mantua (1628–1659). Spain thus became embroiled in the Thirty Years’ War. These conflicts, on top of an empty treasury, brought disaster.

Spanish’s situation worsened with internal conflicts and fresh military defeats through the remainder of the seventeenth century. In 1640 Spain faced serious revolts in Catalonia and Portugal. In 1643 the French inflicted a crushing defeat on a Spanish army at Rocroi in what is now Belgium. By the Treaty of the Pyrenees of 1659, which ended the French-Spanish conflict, Spain was compelled to surrender extensive territories to France. In 1688 the Spanish crown reluctantly recognized the independence of Portugal, almost a century after the two crowns were joined. The era of Spanish dominance in Europe had ended.

Absolutism in Austria and Prussia

FOCUS QUESTION What were the social conditions of eastern Europe, and how did the rulers of Austria and Prussia transform their nations into powerful absolutist monarchies?

The rulers of eastern Europe also labored to build strong absolutist states in the seventeenth century. But they built on social and economic foundations far different from those in western Europe, namely serfdom and the strong nobility who benefited from it. The endless wars of the seventeenth century allowed monarchs to increase their power by building large armies, increasing taxation, and suppressing representative institutions. In exchange for their growing political authority, monarchs allowed nobles to remain as unchallenged masters of their peasants, a deal that appeased both king and nobility, but left serfs at the mercy of the lords. The most successful states were Austria and Prussia, which witnessed the rise of absolutism between 1620 and 1740.

The Return of Serfdom in the East

While economic and social hardship was common across Europe, important differences existed between east and west. In the west the demographic losses of the Black Death allowed peasants to escape from serfdom as they acquired enough land to feed themselves. In eastern Europe seventeenth-century peasants had largely lost their ability to own land independently. Eastern lords dealt with the labor shortages caused by the Black Death by restricting the rights of their peasants to move to take advantage of better opportunities elsewhere. In Prussian territories by 1500 the law required that runaway peasants be hunted down and returned to their lords. Moreover, lords steadily took more and more of their peasants’ land and arbitrarily imposed heavier labor obligations. By the early 1500s lords in many eastern territories could command their peasants to work for them without pay for as many as six days a week.

The gradual erosion of the peasantry’s economic position was bound up with manipulation of the legal system. The local lord was also the local prosecutor, judge, and jailer. There were no independent royal officials to provide justice or uphold the common law. The power of the lord reached far into serfs’ everyday lives. Not only was their freedom of movement restricted, but they also required permission to marry or could be forced to marry. Lords could reallocate the lands worked by their serfs at will or sell serfs apart from their families. These conditions applied even on lands owned by the church.

Between 1500 and 1650 the consolidation of serfdom in eastern Europe was accompanied by the growth of commercial agriculture, particularly in Poland and eastern Germany. As economic expansion and population growth resumed after 1500, eastern lords increased the production of their estates by squeezing sizable surpluses out of the impoverished peasants. They then sold these surpluses to foreign merchants, who exported them to the growing cities of wealthier western Europe. The Netherlands and England benefited the most from inexpensive grain from the east.

It was not only the peasants who suffered in eastern Europe. With the approval of kings, landlords systematically undermined the medieval privileges of the towns and the power of the urban classes. Instead of selling products to local merchants, landlords sold
directly to foreigners, bypassing local towns. Eastern towns also lost their medieval right of refuge and were compelled to return runaways to their lords. The population of the towns and the urban middle classes declined greatly. This development both reflected and promoted the supremacy of noble landlords in most of eastern Europe in the sixteenth century.

The Austrian Habsburgs

Like all the people of central Europe, the Habsburgs emerged from the Thirty Years’ War impoverished and exhausted. Their efforts to destroy Protestantism in the German lands and to turn the weak Holy Roman Empire into a real state had failed. Although the Habsburgs remained the hereditary emperors, real power lay in the hands of a bewildering variety of separate political jurisdictions. Defeat in central Europe encouraged the Habsburgs to turn away from a quest for imperial dominance and to focus inward and eastward in an attempt to unify their diverse holdings. If they could not impose Catholicism in the empire, at least they could do so in their own domains.

Habsburg victory over Bohemia during the Thirty Years’ War was an important step in this direction. Ferdinand II (r. 1619–1637) drastically reduced the power of the Bohemian Estates, the largely Protestant representative assembly. He also confiscated the landholdings of Protestant nobles and gave them to loyal Catholic nobles and to the foreign aristocratic mercenaries who led his armies. After 1650 a large portion of the Bohemian nobility was of recent origin and owed its success to the Habsburgs.

With the support of this new nobility, the Habsburgs established direct rule over Bohemia. Under their rule the condition of the enserfed peasantry worsened substantially: three days per week of unpaid labor became the norm. Protestantism was also stamped out. These changes were significant advances in creating absolutist rule in Bohemia.

Ferdinand III (r. 1637–1657) continued to build state power. He centralized the government in the empire’s German-speaking provinces, which formed the core Habsburg holdings. For the first time, a permanent standing army was ready to put down any internal opposition. The Habsburg monarchy then turned east toward the plains of Hungary, which had been divided between the Ottomans and the Habsburgs in the early sixteenth century. Between 1683 and 1699 the Habsburgs pushed the Ottomans from most of Hungary and Transylvania. The recovery of all the former kingdom of Hungary was completed in 1718.

The Hungarian nobility, despite its reduced strength, effectively thwarted the full development of Habsburg absolutism. Throughout the seventeenth century Hungarian nobles rose in revolt against attempts to impose absolute rule. They never triumphed decisively, but neither were they crushed the way the nobility in Bohemia had been in 1620. In 1703, with the Habsburgs bogged down in the War of the Spanish Succession, the Hungarians rose in one last patriotic rebellion under Prince Francis Rákóczy. The prince and his forces were eventually defeated, but the Habsburgs agreed to restore many of the traditional privileges of the aristocracy in return for Hungarian acceptance of hereditary Habsburg rule. Thus Hungary, unlike Austria and Bohemia, was never fully integrated into a centralized, absolute Habsburg state.

Despite checks on their ambitions in Hungary, the Habsburgs made significant achievements in statebuilding elsewhere by forging consensus with the church and the nobility. A sense of common identity and loyalty to the monarchy grew among elites in Habsburg lands, even to a certain extent in Hungary. German became the language of the state, and zealous Catholicism helped fuse a collective identity. Vienna became the political and cultural center of the empire. By 1700 it was a thriving city with a population of one hundred thousand and its own version of Versailles, the royal palace of Schönbrunn.

Prussia in the Seventeenth Century

In the fifteenth and sixteenth centuries the Hohenzollern family had ruled parts of eastern Germany as the imperial electors of Brandenburg and the dukes of Prussia. The title of “elector” gave its holder the privilege of being one of only seven princes or archbishops entitled to elect the Holy Roman emperor, but the electors had little real power. When he came to power in 1640, the twenty-year-old Frederick William, later known as the “Great Elector,” was determined to unify his three provinces and enlarge his holdings. These provinces were Brandenburg; Prussia, inherited in 1618; and scattered territories along the Rhine inherited in 1614 (Map 15.3). Each was inhabited by German-speakers, but each had its own estates. Although the estates had not met regularly during the chaotic Thirty Years’ War, taxes could not be levied without their consent. The estates of Brandenburg and Prussia were dominated by the nobility and the landowning classes, known as the Junkers.

Frederick William profited from ongoing European war and the threat of invasion from Russia when he argued for the need for a permanent standing army. In 1660 he persuaded Junkers in the estates to accept taxation without consent in order to fund an army. They agreed to do so in exchange for reconfirmation of their own privileges, including authority over the serfs. Having won over the Junkers, the king crushed poten-

---

Junkers The nobility of Brandenburg and Prussia, they were reluctant allies of Frederick William in his consolidation of the Prussian state.
By following his own advice, Frederick William tripled state revenue during his reign and expanded the army drastically. In 1688 a population of 1 million supported a peacetime standing army of 30,000. In 1701 the elector's son, Frederick I, received the elevated title of king of Prussia (instead of elector) as a reward for aiding the Holy Roman emperor in the War of the Spanish Succession.

**The Consolidation of Prussian Absolutism**

Frederick William I, "the Soldiers' King" (r. 1713–1740), completed his grandfather's work, eliminating the last traces of parliamentary estates and local self-government. It was he who truly established Prussian absolutism and transformed Prussia into a military state. Frederick William was intensely attached to military life. He always wore an army uniform, and he lived the highly disciplined life of the professional soldier. Years later he followed the family tradition by leaving his own written instructions to his son: "A formidable army and a war chest large enough to make this army mobile in times of need can create great respect for you in the world, so that you can speak a word like the other powers."
Penny-pinching and hard-working, Frederick William achieved results. The king and his ministers built an exceptionally honest and conscientious bureaucracy to administer the country and foster economic development. Twelfth in Europe in population, Prussia had the fourth-largest army by 1740. The Prussian army was the best in Europe, astonishing foreign observers with its precision, skill, and discipline. As one Western traveler put it: “There is no theatre in Berlin whatsoever, diversion is understood to be the handsome troops who parade daily. A special attraction is the great Potsdam Grenadier Regiment... when they practice drill, when they fire and when they parade up and down, it is as if they form a single body.”

Nevertheless, Prussians paid a heavy and lasting price for the obsessions of their royal drillmaster. Army expansion was achieved in part through forced conscription, which was declared lifelong in 1713. Desperate draftees fled the country or injured themselves to avoid service. Finally, in 1733 Frederick William I ordered that all Prussian men would undergo military training and serve as reservists in the army, allowing him to preserve both agricultural production and army size. To appease the Junkers, the king enlisted them to lead his growing army. The proud nobility thus commanded the peasantry in the army as well as on the estates.

With all men harnessed to the war machine, Prussian civil society became rigid and highly disciplined. As a Prussian minister later summed up, “To keep quiet is the first civic duty.” Thus the policies of Frederick William I, combined with harsh peasant bondage and Junker tyranny, laid the foundations for a highly militaristic country.

Russia occupied a unique position among Eurasian states. With borders straddling eastern Europe and northwestern Asia, its development into a strong imperial state drew on elements from both continents. Like the growth of the Muslim empires in Central and South Asia and the Ming Dynasty in China, the expansion of Russia was a result of the weakening of the great Mongol Empire. After declaring independence from the Mongols, the Russian tsars conquered a vast empire, extending through North Asia all the way to the Pacific Ocean. State-building and territorial expansion culminated during the reign of Peter the Great, who forcibly introduced elements of Western culture and society.

While Europeans debated, and continued to debate, whether or not Russia was a Western society, there was no question in their minds that the Ottomans were outsiders. Even absolutist rulers disdained Ottoman sultans as cruel and tyrannical despots. Despite stereotypes, however, the Ottoman Empire was in many ways more tolerant than its Western counterparts, providing protection and security to other religions while steadfastly maintaining the Muslim faith. The Ottoman state combined the Byzantine heritage of the territory it had conquered with Persian and Arab traditions. Flexibility and openness to other ideas and practices were sources of strength for the empire.
Mongol Rule in Russia and the Rise of Moscow

In the thirteenth century the Mongols had conquered Kievan Rus, the medieval Slavic state centered first at Novgorod and then at Kiev, a city on the Dnieper River; this state included most of present-day Ukraine, Belarus, and part of northwest Russia. For two hundred years, the Mongols forced the Slavic princes to submit to their rule and to render tribute and slaves. The princes of the Grand Duchy of Moscow, a principality within Kievan Rus, became particularly adept at serving the Mongols. They loyally put down uprisings and collected the khan's taxes. Eventually the Muscovite princes were able to destroy the other princes who were their rivals for power. Ivan III (r. 1462–1505), known as Ivan the Great, successfully expanded the principality of Moscow eastward toward the Baltic Sea and westward to the Ural Mountains and the Siberian frontier.

By 1480 Ivan III was strong enough to refuse to pay tribute to the Mongols and declare the autonomy of Moscow. To legitimize their new position, Ivan and his successors borrowed elements of Mongol rule. They forced weaker Slavic principalities to render tribute previously paid to Mongols and borrowed Mongol institutions such as the tax system, postal routes, and census. Loyalty from the highest-ranking nobles, or boyars, helped the Muscovite princes consolidate their power.

Another source of legitimacy for Moscow was its claim to the political and religious legacy of the Byzantine Empire. After the fall of Constantinople to the Turks in 1453, the princes of Moscow saw themselves as the heirs of both the Byzantine caesars (or emperors) and the empire’s Orthodox Christianity. The title “tsar,” first taken by Ivan IV in 1547, is in fact a contraction of caesar. The tsars considered themselves rightful and holy rulers, an idea promoted by Orthodox churchmen who spoke of “holy Russia” as the “Third Rome.” The marriage of Ivan III to the daughter of the last Byzantine emperor further enhanced Moscow’s assertion of imperial authority.

Building the Russian Empire

Developments in Russia took a chaotic turn with the reign of Ivan IV (r. 1533–1584), the famous “Ivan the Terrible,” who rose to the throne at age three. His mother died, possibly poisoned, when he was eight, leaving Ivan to suffer insults and neglect from the boyars at court. At age sixteen Ivan pushed aside his advisers, and in an awe-inspiring ceremony, with gold coins pouring down on his head, he majestically crowned himself tsar.

After the sudden death of his wife, however, Ivan began a campaign of persecution against those he suspected of opposing him. He executed members of leading boyar families, along with their families, friends, servants, and peasants. To replace them, Ivan created a new service nobility, whose loyalty was guaranteed by their dependence on the state for land and titles.

As landlords demanded more from the serfs who survived the persecutions, growing numbers of peasants fled toward wild, recently conquered territories to the east and south. There they joined free groups and warrior bands known as Cossacks. Ivan responded by tying peasants ever more firmly to the land and to noble landholders. Simultaneously, he ordered that urban dwellers be bound to their towns and jobs so that he could tax them more heavily. The urban classes had no security in their property, and even the wealthiest merchants were dependent agents of the tsar. These restrictions checked the growth of the Russian middle classes and stood in sharp contrast to economic and social developments in western Europe.

Ivan combined domestic oppression with external aggression. His reign was successful in defeating the remnants of Mongol power, adding vast new territories to the realm, and laying the foundations for the huge, multiethnic Russian empire. In the 1550s, strengthened by an alliance with Cossack bands, Ivan conquered the Muslim khanates of Kazan and Astrakhan and brought the fertile steppe region around the Volga River under Russian control. In the 1580s Cossacks fighting for the Russian state crossed the Ural Mountains and began the long conquest of Siberia. Because of the size of the new territories and their distance from Moscow, the Russian state did not initially seek to impose the Orthodox religion and maintained local elites in positions of honor and leadership, buying their loyalty with grants of land. In relying on cooperation from local elites and ruthlessly exploiting the common people, the Russians followed the pattern of the Spanish and other early modern European imperial states.

Following Ivan’s death, Russia entered a chaotic period known as the “Time of Troubles” (1598–1613).
Russian Peasant  An eighteenth-century French artist visiting Russia recorded his impressions of the daily life of the Russian people in this etching of a fish merchant pulling his wares through a snowy village on a sleigh. Two caviar vendors behind him make a sale to a young mother standing at her doorstep with her baby in her arms. (Pierson: Les Amis de Paris—Saint Petersburgh)

While Ivan’s relatives struggled for power, Cossacks and peasants rebelled against nobles and officials. This social explosion from below brought the nobles together. They crushed the Cossack rebellion and brought Ivan’s sixteen-year-old grandnephew, Michael Romanov, to the throne (r. 1613–1645). The Romanov dynasty would endure as one of the most successful European absolutist dynasties until the Russian Revolution of 1917.

Like their Western counterparts, the Romanov tsars made several important achievements in state-building during the second half of the seventeenth century. After a long war, Russia gained land in Ukraine from Poland in 1667 and completed the conquest of Siberia by the end of the century. Territorial expansion was accompanied by growth of the bureaucracy and the army. The tsars employed foreign experts to reform the Russian army, and enlisted Cossack warriors to fight Siberian campaigns. The great profits from Siberia’s natural resources, especially furs, funded the Romanovs’ bid for Great Power status. Russian imperialist expansion to the east paralleled the Western powers’ exploration and conquest of the Atlantic world in the same period.

The growth of state power did nothing to improve the lot of the common people. In 1649 a new law code extended serfdom to all peasants in the realm, giving lords unrestricted rights over their serfs and establishing penalties for harboring runaways. The new code also removed the privileges that non-Russian elites had enjoyed within the empire and required conversion to

Peter the Great  This compelling portrait by Grigory Musikiysky captures the strength and determination of the warrior-tsar in 1723, after more than three decades of personal rule. In his hand Peter holds the scepter, symbol of royal sovereignty, and across his breastplate is draped an ermine fur, a mark of honor. In the background are the battleships of Russia’s new Baltic fleet and the famous St. Peter and St. Paul Fortress that Peter built in St. Petersburg. (Hermitage/ St. Petersburg, Russia/Bridgeman Art Library)
**EVALUATING THE EVIDENCE 15.2**

**Peter the Great and Foreign Experts**

*John Deane, an eminent shipbuilder, was one of the many foreign artisans and experts brought to Russia by Peter the Great after the latter’s foreign tour of 1697. Several months after his arrival in Russia, Deane sent a glowing account of the tsar’s technical prowess to his patron in England, the marquess of Carmarthen, admiral of the English fleet.*

At my arrival in Moscow, I fell very ill of the Bloody-Flux, which made me be in Moscow when his Majesty came home: About the latter end of October I was somewhat recovered, his Majesty then carried me down to Voronize* with him. Voronize is about 400 English Miles South-East from Moscow. There the Czar immediately set up a ship of 60 guns, where he is both Foreman and Master-Builder; and not to flatter him, I’ll assure your Lordship it will be the best ship among them, and ’tis all from his own Draught; How he fram’d her together and how he made the Mould, and in so short a time as he did is really wonderful: But he is able at this day to put his own notions into practice, and laugh at his Dutch and Italian builders for their ignorance. There are several pieces of workmanship, as in the keel, stem, and post, which are all purely his own invention, and sound good work, and would be approved of by all the shipwrights of England if they saw it. . . .

After some time [I] fell sick again; and at Christmas, when his Majesty came to Moscow, he brought me back again for recovery of my health, where I am at present. . . . The whole place is inhabited by the Dutch; I believe there may be 400 families. Last Sunday and Monday the strangers were invited to the consecration of General La Fort’s house, which is the noblest building in Russia, and finely furnisht. There were all the envoys, and as near as I could guess 200 gentlemen, English, French, and Dutch, and about as many ladies; each day were dancing and musick. All the envoys, and all the lords (but three in Moscow) are going to Voronize to see the fleet, I suppose. His majesty went last Sunday to Voronize with Prince Alexander and I am to go down (being something recovered) with the Vice-Admiral about six days hence.

**EVALUATE THE EVIDENCE**

1. According to Deane, what evidence did Peter give of his skills in shipbuilding? Based on this document, how would you characterize the relationship between Peter the Great and his foreign experts?

2. What other evidence does Deane provide of the impact of foreigners on life in Russia?

Source: John Deane, A Letter from Moscow to the Marquess of Carmarthen, Relating to the Czar of Muscovy’s Forwardness in His Great Navy, &c. Since His Return Home, London, 1699.

---

Russian Orthodoxy. Henceforth, Moscow maintained strict control of trade and administration throughout the empire.

The peace imposed by harsh Russian rule was disrupted in 1670 by a rebellion led by the Cossack Stenka Razin, who attracted a great army of urban poor and peasants. He and his followers killed landlords and government officials and proclaimed freedom from oppression, but their rebellion was defeated in 1671. The ease with which Moscow crushed the rebellion testifies to the success of the Russian state in unifying and consolidating its empire.

**The Reforms of Peter the Great**

Heir to Romanov efforts at state-building, Peter the Great (r. 1682–1725) embarked on a tremendous campaign to accelerate and complete these processes. A giant for his time at six feet seven inches, and possessing enormous energy and willpower, Peter built on the service obligations of Ivan the Terrible and his successors and continued their tradition of territorial expansion. In particular, he was determined to gain access to the sea for his virtually landlocked state.

Peter realized a first step toward this goal by conquering the Ottoman fort of Azov in 1696 and quickly built Russia’s first navy base. In 1697 the tsar led a group of 250 Russian officials and young nobles on an eighteen-month tour of western European capitals. Peter was fascinated by foreign technology and he hoped to forge an anti-Ottoman alliance to strengthen his claims on the Black Sea. Traveling unofficially to avoid lengthy diplomatic ceremonies, Peter met with foreign kings, master shipbuilders, gunners, and other specialists. He failed to secure a military alliance, but he did learn his lessons from the growing power of the Dutch and the English. He also engaged more than a hundred foreign experts to return with him to Russia to help build the navy and improve Russian infrastructure. (See “Evaluating the Evidence 15.2: Peter the Great and Foreign Experts,” above.)
Having failed to gain support for an anti-Ottoman alliance and suffering a reversal of fortune at Azov, Peter switched tactics and entered into a secret agreement with Denmark and Poland to wage a sudden war of aggression against Sweden with the goal of securing access to the Baltic Sea. Peter and his allies believed that their combined forces could win easy victories because Sweden was in the hands of a new and inexperienced king.

Eighteen-year-old Charles XII of Sweden (1697–1718) surprised Peter. He defeated Denmark quickly in 1700, then turned on Russia. In a blinding snowstorm, his well-trained professional army attacked and routed unsuspecting Russians besieging the Swedish fortress of Narva on the Baltic coast. It was, for the Russians, a grim beginning to the long and brutal Great Northern War, which lasted from 1700 to 1721. Peter responded to this defeat with new measures to increase state power, strengthen his military forces, and gain victory. He required all nobles to serve in the army or in the civil administration—for life. Since a more modern army and government required skilled experts, Peter created new schools and universities and required every young nobleman to spend five years in education away from home. Peter established an interlocking military-civilian bureaucracy with fourteen ranks, and he decreed that all had to start at the bottom and work toward the top. The system allowed some people of non-noble origins to rise to high positions, a rarity in Europe at the time. These measures gradually combined to make the army and government more powerful and efficient.

Peter also greatly increased the service requirements of commoners. In the wake of the Narva disaster, he established a regular standing army of more than two hundred thousand peasant-soldiers, drafted for life and commanded by noble officers. He added an additional hundred thousand men in special regiments of Cossacks and foreign mercenaries. To fund the army, taxes on peasants increased threefold during Peter’s reign. Serfs were also arbitrarily assigned to work in the growing number of factories and mines that supplied the military. Under Peter, Russia’s techniques for governing its territories—including the policing of borders and individual identity documents—were far ahead of those of most other imperial powers.
In 1709 Peter’s new war machine was able to crush the small army of Sweden in Ukraine at Poltava, one of the most significant battles in Russian history. Russia’s victory against Sweden was conclusive in 1721, and Estonia and present-day Latvia came under Russian rule for the first time. The cost was high: warfare consumed 80 to 85 percent of all revenues. But Russia became the dominant power in the Baltic and very much a great European power.

After his victory at Poltava, Peter channeled enormous resources into building a new Western-style capital on the Baltic to rival the great cities of Europe. Originally a desolate and swampy Swedish outpost, the magnificent city of St. Petersburg was designed to reflect modern urban planning, with wide, straight avenues, buildings set in a uniform line, and large parks. Each summer, twenty-five thousand to forty thousand peasants were sent to provide construction labor in St. Petersburg without pay.

There were other important consequences of Peter’s reign. For Peter, modernization meant westernization, and he encouraged the spread of Western culture along with technology and urban planning. Peter required nobles to shave their heavy beards and wear Western clothing, previously banned in Russia. He also ordered them to attend parties where young men and women would mix together and freely choose their own spouses. From these efforts a new elite class of Western-oriented Russians began to emerge.

Peter’s reforms were unpopular with many Russians. For nobles, one of Peter’s most detested reforms was the imposition of unigeniture—inheritance of land by one son alone—cutting daughters and other sons from family property. For peasants, the reign of the tsar saw a significant increase in the bonds of serfdom, and the gulf between the enserfed peasantry and the educated nobility increased. Despite the unpopularity of Peter’s reforms, his modernizing and westernizing of Russia paved the way for it to move somewhat closer to the European mainstream in its thought and institutions during the Enlightenment, especially under Catherine the Great.

**The Ottoman Empire**

Most Christian Europeans perceived the Ottomans as the antithesis of their own values and traditions and viewed the empire as driven by an insatiable lust for warfare and conquest. In their view the fall of Constantinople was a historic catastrophe and the taking of the Balkans a form of despotism imprisonment. To Ottoman eyes, the world looked very different. The siege of Constantinople liberated a glorious city from its long decline under the Byzantines. Rather than being a despoiled captive, the Balkans were a haven for refugees fleeing the growing intolerance of Western Christian powers. The Ottoman Empire provided a safe haven for Jews, Muslims, and even some Christians from the Inquisition and religious war.

The Ottomans came out of Central Asia as conquering warriors, settled in Anatolia (present-day Turkey), and, at their peak in the mid-sixteenth century, ruled one of the most powerful empires in the world (see Chapter 14). Their possessions stretched from western Persia across North Africa and into the heart of central Europe (Map 15.4).

The Ottoman Empire was built on a unique model of state and society. Agricultural land was the personal hereditary property of the sultan, and peasants paid taxes to use the land. There was therefore an almost complete absence of private landed property and no hereditary nobility. The Ottomans also employed a distinctive form of government administration. The top ranks of the bureaucracy were staffed by the sultan’s slave corps. Because Muslim law prohibited enslaving other Muslims, the sultan’s agents purchased slaves along the borders of the empire. Within the realm, the sultan levied a “tax” of one thousand to three thousand male children on the conquered Christian populations in the Balkans every year. These young slaves were raised in Turkey as Muslims and were trained to fight and to administer. Unlike enslaved Africans in European colonies, who faced a dire fate, the most talented Ottoman slaves rose to the top of the bureaucracy, where they might acquire wealth and power. The less fortunate formed the core of the sultan’s army, the janissary corps. These highly organized and efficient troops gave the Ottomans a formidable advantage in war with western Europeans. By 1683 service in the janissary corps had become so prestigious that the sultan ceased recruitment by force, and it became a volunteer army open to Christians and Muslims.

The Ottomans divided their subjects into religious communities, and each millet, or “nation,” enjoyed autonomous self-government under its religious leaders. The Ottoman Empire recognized Orthodox Christians, Jews, Armenian Christians, and Muslims as distinct millets, but despite its tolerance, the empire was an explicitly Islamic state. The millet system created a powerful bond between the Ottoman ruling class and religious leaders, who supported the sultan’s rule in return for extensive authority over their own

---

- **sultan** The ruler of the Ottoman Empire; he owned all the agricultural land of the empire and was served by an army and bureaucracy composed of highly trained slaves.
- **janissary corps** The core of the sultan’s army, composed of slave conscripts from non-Muslim parts of the empire; after 1683 it became a volunteer force.
- **millet system** A system used by the Ottomans whereby subjects were divided into religious communities, with each millet (nation) enjoying autonomous self-government under its religious leaders.
The Ottomans, like their great rivals the Habsburgs, rose to rule a vast dynastic empire encompassing many different peoples and ethnic groups. The army and the bureaucracy served to unite the disparate territories into a single state under an absolutist ruler.

communities. Each millet collected taxes for the state, regulated group behavior, and maintained law courts, schools, houses of worship, and hospitals for its people.

Istanbul (known outside the empire by its original name, Constantinople) was the capital of the empire. The “old palace” was for the sultan’s female family members, who lived in isolation under the care of eunuchs, men who were castrated to prevent sexual relations with women. The newer Topkapi palace was where officials worked and young slaves trained for future administrative or military careers. Sultans married women of the highest social standing, while keeping many concubines of low rank. To prevent the elite families into which they married from acquiring influence over the government, sultans procreated only with their concubines and not with official wives. They also adopted a policy of allowing each concubine to produce only one male heir. At a young age, each son went to govern a province of the empire accompanied by his mother. These practices were intended to stabilize power and prevent a recurrence of the civil wars of the late fourteenth and early fifteenth centuries.

Sultan Suleiman undid these policies when he boldly married his concubine, a former slave of Polish origin named Hürrem, and had several children with her. (See “Individuals in Society: Hürrem,” at right.) Starting with Suleiman, imperial wives began to take on more power. Marriages were arranged between sultans’ daughters and high-ranking servants, creating powerful new members of the imperial household. Over time, the sultan’s exclusive authority waned in favor of a more bureaucratic administration.

Like European states, the Ottoman Empire suffered significant crises in the late sixteenth and early
IN SOCIETY

Hürrem

In Muslim culture, harem means a sacred place or a sanctuary. The term was applied to the part of the household occupied by women and children and forbidden to men outside the family. The most famous harem member in Ottoman history was Hürrem, wife of Suleiman the Magnificent.

Like many of the sultan’s concubines, Hürrem (1505?–1558) was of foreign birth. Tradition holds that she was born Aleksandra Lisowska in the kingdom of Poland (present-day Ukraine). Captured during a Tartar raid and enslaved, she entered the imperial harem between 1517 and 1520, when she was about fifteen years old. Reports from Venetian visitors claimed that she was not outstandingly beautiful, but was possessed of wonderful grace, charm, and good humor, earning her the Turkish nickname Hürrem, or “joyful one.” Soon after her arrival, Hürrem became the imperial favorite.

Suleiman’s love for Hürrem led him to set aside all precedents for the role of a concubine, including the rule that concubines must cease having children once they gave birth to a male heir. By 1531 Hürrem had given Suleiman one daughter and five sons. In 1533 or 1534 Suleiman entered formal marriage with his consort—an unprecedented and scandalous honor for a concubine. Suleiman reportedly paid attention to his wife and defied convention by allowing her to remain in the palace throughout her life instead of accompanying her son to a provincial governorship.

Contemporaries were shocked by Hürrem’s influence over the sultan and resentful of the apparent role she played in politics and diplomacy. The Venetian ambassador Bassano wrote that “the Janissaries and the entire court hate her and her children likewise, but because the Sultan loves her, no one dares to speak.” Court rumors circulated that Hürrem used witchcraft to control the sultan and ordered the sultan’s execution of his first-born son by another mother.

The correspondence between Suleiman and Hürrem, unavailable until the nineteenth century, along with Suleiman’s own diaries, confirms her status as the sultan’s most trusted confidant and adviser. During his frequent absences, the pair exchanged passionate love letters. Hürrem included political information and warned of potential uprisings. She also intervened in affairs between the empire and her former home, apparently helping Poland attain its privileged diplomatic status. She brought a feminine touch to diplomatic relations, sending personally embroidered articles to foreign leaders.

Hürrem used her enormous pension to contribute a mosque, two schools, a hospital, a fountain, and two public baths to Istanbul. In Jerusalem, Mecca, and Istanbul, she provided soup kitchens and hospices for pilgrims and the poor. She died in 1558, eight years before her husband. Her son Selim II (r. 1566–1574) inherited the throne.

This portrait emphasizes the beauty and sensual allure of Hürrem, who journeyed from slave to harem favorite to wife of the sultan and mother of his successor. (Pictures from History/akg-images)

Relying on Western observers’ reports, historians traditionally depicted Hürrem as a manipulative and power-hungry social climber. They portrayed her career as the beginning of a “sultanate of women” in which strong imperial leadership gave way to court intrigue and debauchery. More recent historians have emphasized the intelligence and courage Hürrem demonstrated in navigating the ruthlessly competitive world of the harem.

Hürrem’s journey from Ukrainian maiden to concubine to sultan’s wife captured enormous public attention. She is the subject of numerous paintings, plays, and novels, as well as an opera, a ballet, and a symphony by the composer Haydn. Interest in and suspicion of Hürrem continues. In 2003 a Turkish miniseries once more depicted her as a scheming intriguer.

QUESTIONS FOR ANALYSIS

1. What types of power did Hürrem exercise during her lifetime? How did her gender enable her to attain certain kinds of power and also constrain her ability to exercise it?
2. What can an exceptional woman like Hürrem reveal about the broader political and social world in which she lived?

seventeenth centuries. Raised in the harem rather than taking on provincial governorships, the sultans who followed Suleiman were inexperienced and faced numerous political revolts. Ottoman finances suffered from the loss of international trade to the Portuguese and the Dutch, and the empire—like Spain—suffered from rising prices and a shrinking population. While the Bourbon monarchy was modernizing and enlarging the French army, the Ottomans failed to adopt new military technologies and training methods. As a result, its military strength, long feared throughout Europe, declined, leading ultimately to the ceding of Hungary and Transylvania to the Austrian Habsburgs in 1699 (see page 482). The Ottoman state adapted to these challenges with some measure of success, but did not recover the glory it held under Suleiman.

**Constitutional Rule in England and the Dutch Republic**

**FOCUS QUESTION** Why and how did the constitutional state triumph in the Dutch Republic and England?

While France, Prussia, Russia, and Austria developed absolutist states, England and the Netherlands evolved toward constitutionalism, which is the limitation of government by law. Constitutionalism also implies a balance between the authority and power of the government, on the one hand, and the rights and liberties of the subjects, on the other. By definition, all constitutionalist governments have a constitution, be it written or unwritten. A nation's constitution may be embodied in one basic document and occasionally revised by amendment, like the Constitution of the United States. Or it may be only partly formalized and include parliamentary statutes, judicial decisions, and a body of traditional procedures and practices, like the English and Dutch constitutions.

Despite their common commitment to constitutional government, England and the Dutch Republic represented significantly different alternatives to absolute rule. After decades of civil war and an experiment with republicanism, the English opted for a constitutional monarchy in 1688. This settlement, which has endured to this day, retained a monarch as the titular head of government but vested sovereignty in an elected parliament. Upon gaining independence from Spain in 1648, the Dutch rejected monarchical rule, adopting a republican form of government in which elected estates held supreme power. Neither was democratic by any standard, but to frustrated inhabitants of absolutist states they were shining examples of the restraint of arbitrary power and the rule of law.

**Religious Divides and Civil War**

In 1688 Queen Elizabeth I of England (r. 1558–1603) exercised very great personal power; by 1689 the English monarchy was severely circumscribed. A rare female monarch, Elizabeth was able to maintain control over her realm in part by refusing to marry and submit to a husband. She was immensely popular with her people, but left no immediate heir to continue her legacy.

In 1603 Elizabeth's Scottish cousin James Stuart succeeded her as James I (r. 1603–1625). Like Louis XIV, James believed that a monarch has a divine right to his authority and is responsible only to God. James went so far as to lecture the House of Commons: “There are no privileges and immunities which can stand against a divinely appointed King.” Such a view ran directly counter to the long-standing English tradition that a person's property could not be taken away without due process of law. James I and his son Charles I (r. 1625–1649) considered such constraints intolerable and a threat to their divine-right prerogative. Consequently, bitter squabbles erupted between the Crown and the House of Commons. The expenses of England's intervention in the Thirty Years' War, through hostilities with Spain (1625–1630) and France (1627–1629), only exacerbated tensions. Charles I's response was to refuse to summon Parliament from 1629 onward.

Religious issues also embittered relations between the king and the House of Commons. In the early seventeenth century many English people felt dissatisfied with the Church of England established by Henry VIII (r. 1509–1547). Calvinist Puritans wanted to take the Reformation further by “purifying” the Anglican Church of Roman Catholic elements—elaborate vestments and ceremonials, bishops, and even the giving and wearing of wedding rings.

James I responded to such ideas by declaring, “No bishop, no king.” For James, bishops were among the chief supporters of the throne. His son and successor, Charles I, further antagonized religious sentiments by marrying a French princess and supporting the heavy-handed policies of the archbishop of Canter-

Charles avoided addressing grievances against him by refusing to call Parliament into session from 1629 to 1640. Instead, he financed his government through extraordinary stopgap levies considered illegal by most English people. However, when Scottish Calvinists revolted against his religious policies, Charles was forced to summon Parliament to obtain funds for an army to put down the revolt. Accordingly, this Parliament, called the “Long Parliament” because it sat from 1640 to 1660, enacted legislation that limited the power of the monarch, and made government without Parliament impossible.

In 1641 the Parliament passed the Triennial Act, which compelled the king to summon Parliament every three years. The Commons impeached Archbishop Laud and then threatened to abolish bishops. King Charles, fearful of a Scottish invasion—the original reason for summoning Parliament—reluctantly accepted these measures.

The next act in the conflict was precipitated by the outbreak of rebellion in Ireland, where English governors and landlords had long exploited the people. In 1641 the Catholic gentry of Ireland led an uprising in response to a feared invasion by anti-Catholic forces of the British Long Parliament.

Without an army, Charles I could neither come to terms with the Scots nor respond to the Irish rebellion. After a failed attempt to arrest parliamentary leaders, Charles left London for the north of England, where he began to raise an army. In response, Parliament formed its own army, the New Model Army, composed of the militia of the city of London and country squires with business connections. During the spring of 1642 both sides prepared for war. In July a linen weaver became the first casualty of the civil war during a skirmish between royal and parliamentary forces in Manchester.
The English civil war (1642–1649) pitted the power of the king against that of the Parliament. After three years of fighting, Parliament’s New Model Army defeated the king’s armies at the Battles of Naseby and Langport in the summer of 1645. Charles, though, refused to concede defeat. Both sides jockeyed for position, waiting for a decisive event. This arrived in the form of the army under the leadership of Oliver Cromwell, a member of the House of Commons and a devout Puritan. In 1647 Cromwell’s forces captured the king and dismissed anti-Cromwell members of the Parliament. In 1649 the remaining representatives, known as the “Rump Parliament,” put Charles on trial for high treason. Charles was found guilty and beheaded on January 30, 1649, an act that sent shock waves around Europe.

The Puritan Protectorate

With the execution of Charles, kingship was abolished. The question remained of how the country would be governed. One answer was provided by philosopher Thomas Hobbes (1588–1679). Hobbes held a pessimistic view of human nature and believed that, left to themselves, humans would compete violently for power and wealth. The only solution, as he outlined in his 1651 treatise *Leviathan*, was a social contract in which all members of society placed themselves under the absolute rule of the sovereign, who would maintain peace and order. Hobbes imagined society as a human body in which the monarch served as head and individual subjects together made up the body. Just as the body cannot sever its own head, so Hobbes believed that society could not, having accepted the contract, rise up against its king.

Hobbes’s longing for a benevolent absolute monarch was not widely shared in England. Instead, Oliver Cromwell and his supporters enshrined a commonwealth, or republican government, known as the Protectorate. Theoretically, legislative power rested in the surviving members of Parliament, and executive power was lodged in a council of state. In fact, the army controlled the government, and Oliver Cromwell controlled the army, ruling what was essentially a military dictatorship.

The army prepared a constitution, the Instrument of Government (1653), that invested executive power in a lord protector (Cromwell) and a council of state. It provided for triennial parliaments and gave Parliament the sole power to raise taxes. But after repeated disputes, Cromwell dismissed Parliament in 1655, and the instrument was never formally endorsed. Cromwell continued the standing army and proclaimed quasi-martial law. He divided England into twelve military districts,

*The Family of Henry Chorley, Haberdasher of Preston, ca. 1680*  This painting celebrates the Puritan family values of order, discipline, and self-restraint. The wife is surrounded by her young children, emphasizing her motherly duties, while her husband is flanked by their grown sons. Nevertheless, the woman’s expression suggests she is a strong-minded partner to her husband, not meekly subservient. The couple probably worked side by side in the family business of selling men’s clothing and accessories. (Oil on canvas/Harris Museum and Art Gallery, Preston, Lancashire, UK/Bridgeman Images)
Constitutional Rule in England and the Dutch Republic

1589–1725

Puritan Occupations

These twelve engravings depict typical Puritan occupations and show that the Puritans came primarily from the artisan and lower middle classes. The governing classes and peasants made up a much smaller percentage of the Puritans and generally adhered to the traditions of the Church of England. (Private Collection/C Look and Learn/Peter Jackson Collection/Bridgeman Images)

The Restoration of the English Monarchy

The Restoration of 1660 brought to the throne Charles II (r. 1660–1685), eldest son of Charles I, who had been living on the continent. Both houses of Parliament were also restored, together with the established

each governed by a major general. Reflecting Puritan ideas of morality, Cromwell’s state forbade sports, closed the theaters, and rigorously censored the press.

On the issue of religion, Cromwell favored some degree of toleration, and the Instrument of Government gave all Christians except Roman Catholics the right to practice their faith. Cromwell had long associated Catholicism in Ireland with sedition and heresy, and led an army there to reconquer the country in August 1649. One month later, his forces crushed a rebellion at Drogheda and massacred the garrison. After Cromwell’s departure for England, atrocities worsened. The English banned Catholicism in Ireland, executed priests, and confiscated land from Catholics for English and Scottish settlers. These brutal acts left a legacy of Irish hatred for England.

Cromwell adopted mercantilist policies similar to those of absolutist France. He enforced a Navigation Act (1651) requiring that English goods be transported on English ships. The act was a great boost to the development of an English merchant marine and brought about a short but successful war with the commercially threatened Dutch. While mercantilist legislation ultimately benefited English commerce, for ordinary people the turmoil of foreign war only added to the harsh conditions of life induced by years of civil war. Cromwell also welcomed the immigration of Jews because of their skills in business, and they began to return to England after four centuries of absence.

The Protectorate collapsed when Cromwell died in 1658 and his ineffectual son succeeded him. Fed up with military rule, the English longed for a return to civilian government and, with it, common law and social stability. By 1660 they were ready to restore the monarchy.

The Restoration of the English Monarchy

The Restoration of 1660 brought to the throne Charles II (r. 1660–1685), eldest son of Charles I, who had been living on the continent. Both houses of Parliament were also restored, together with the established
Anglican Church. The Restoration failed to resolve two serious problems, however. What was to be the attitude of the state toward Puritans, Catholics, and dissenters from the established church? And what was to be the relationship between the king and Parliament?

To answer the first question, Parliament enacted the Test Act of 1673 against those outside the Church of England, denying them the right to vote, hold public office, preach, teach, attend the universities, or even assemble for meetings. But these restrictions could not be enforced. When the Quaker William Penn held a meeting of his Friends and was arrested, the jury refused to convict him.

In politics, Charles II’s initial determination to work well with Parliament did not last long. Finding that Parliament did not grant him an adequate income, in 1670 Charles entered into a secret agreement with his cousin Louis XIV. The French king would give Charles £200,000 annually, and in return Charles would relax the laws against Catholics, gradually re-Catholicize England, and convert to Catholicism himself. When the details of this treaty leaked out, a great wave of anti-Catholic sentiment swept England.

When Charles died and his Catholic brother James became king, the worst English anti-Catholic fears were realized. In violation of the Test Act, James II (r. 1685–1688) appointed Roman Catholics to positions in the army, the universities, and local government. When these actions were challenged in the courts, the judges, whom James had appointed, decided in favor of the king. James and his supporters opened new Catholic churches and schools and issued tracts promoting Catholicism. Attempting to broaden his base of support with Protestant dissenters and nonconformists, James granted religious freedom to all.

James’s opponents, a powerful coalition of eminent persons in Parliament and the Church of England, bitterly resisted James’s ambitions. They offered the English throne to James’s heir, his Protestant daughter Mary, and her Dutch husband, Prince William of Orange. In December 1688 James II, his queen, and their infant son fled to France and became pensioners of Louis XIV. Early in 1689 William and Mary were crowned king and queen of England.

**Constitutional Monarchy**

The English call the events of 1688 and 1689 the “Glorious Revolution” because they believe it replaced one king with another with barely any bloodshed. In truth, William’s arrival sparked revolutionary riots and violence across the British Isles and in North American cities such as Boston and New York. Uprisings by supporters of James, known as Jacobites, occurred in 1689 in Scotland. In Ireland, the two sides waged outright war from 1689 to 1691. William’s victory at the Battle of the Boyne (1690) and the subsequent Treaty of Limerick (1691) sealed his accession to power.

In England, the revolution represented the final destruction of the idea of divine-right monarchy. The men who brought about the revolution framed their intentions in the Bill of Rights, which was formulated in direct response to Stuart absolutism. Law was to be made in Parliament; once made, it could not be suspended by the Crown. Parliament had to be called at least once every three years. The independence of the judiciary was established, and there was to be no standing army in peacetime. Protestants could possess arms, but the Catholic minority could not. A Catholic could not inherit the throne. Additional legislation granted freedom of worship to Protestant dissenters, but not to Catholics. William and Mary accepted these principles when they took the throne, and the House of Parliament passed the Bill of Rights in December 1689.

The Glorious Revolution and the concept of representative government found its best defense in political philosopher John Locke’s *Two Treatises of Government* (1690). Locke (1632–1704) maintained that a government that oversteps its proper function—protecting the natural rights of life, liberty, and property—becomes a tyranny. (See “Evaluating the Evidence 15.3: John Locke, *Two Treatises of Government,*” at right.) By “natural” rights Locke meant rights basic to all men because all have the ability to reason. Under a tyrannical government, the people have the natural right to rebellion. On the basis of this link, he justified limiting the vote to property owners. Locke’s idea that there are natural or universal rights equally valid for all peoples and societies was especially popular in colonial America. American colonists also appreciated his arguments that Native Americans had no property rights since they did not cultivate the land and, by extension, no political rights because they possessed no property.

Although the events of 1688 and 1689 brought England closer to Locke’s ideal, they did not constitute a democratic revolution. The revolution placed sovereignty in Parliament, and Parliament represented the upper classes. The age of aristocratic government lasted at least until 1832 and in many ways until 1928, when women received full voting rights.

---

**Test Act** Legislation, passed by the English Parliament in 1673, to secure the position of the Anglican Church by stripping Puritans, Catholics, and other dissenters of the right to vote, preach, assemble, hold public office, and teach at or attend the universities.

**stadtholder** The executive officer in each of the United Provinces of the Netherlands, a position often held by the princes of Orange.
John Locke, *Two Treatises of Government*

In 1688 opponents of King James II invited his daughter Mary and her husband, the Dutch prince William of Orange, to take the throne of England. James fled for the safety of France. One of the most outspoken proponents of the “Glorious Revolution” that brought William and Mary to the throne was philosopher John Locke. In this passage, Locke argues that sovereign power resides in the people, who may reject a monarch who does not obey the law.

But government into whosesoever hands it is put, being as I have before shown, entrusted with this condition, and for this end, that men might have and secure their properties, the prince or senate, however it may have power to make laws for the regulation of property between the subjects one amongst another, yet can never have a power to take to themselves the whole, or any part of the subjects’ property, without their own consent. For this would be in effect to leave them no property at all... 

’Tis true, governments cannot be supported without great charge, and ’tis fit every one who enjoys his share of the protection, should pay, out of this estate, his proportion for the maintenance of it. But still it must be with his own consent, i.e., the consent of the majority, giving it either by themselves, or their representatives chosen by them; for if any one shall claim a power to lay and levy taxes on the people, by his own authority, and without such consent of the people, he thereby invades the fundamental law of property, and subverts the end of government. For what property have I in that which another may be right to take when he pleases to himself. . . .

The constitution of the legislative is the first and fundamental act of society, whereby provision is made for the continuation of their union, under the direction of persons, and bonds of laws, made by persons authorized thereunto, by the consent and appointment of the people, without which no one man, or number of men, amongst them, can have authority of making laws that shall be binding to the rest. When any one, or more, shall take upon them to make laws, whom the people have not appointed so to do, they make laws without authority, which the people are not therefore bound to obey; by which means they come again to be out of subjection, and may constitute to themselves a new legislative, as they think best, being in full liberty to resist the force of those, who, without authority, would impose any thing upon them.

**EVALUATE THE EVIDENCE**

1. For what reason do people form a government, according to Locke? What would be the justification for disobeying laws and rejecting the authority of government?

2. In what ways does this document legitimize the events of the Glorious Revolution?

---

The Dutch Republic in the Seventeenth Century

In the late sixteenth century the seven northern provinces of the Netherlands fought for and won their independence from Spain. The independence of the Republic of the United Provinces of the Netherlands was recognized in 1648 in the treaty that ended the Thirty Years’ War. In this period, often called the “golden age” of the Netherlands, Dutch ideas and attitudes played a profound role in shaping a new and modern worldview. At the same time, the United Provinces developed its own distinctive model of a constitutional state.

Rejecting the rule of a monarch, the Dutch established a republic, a state in which power rested in the hands of the people and was exercised through elected representatives. Other examples of republics in early modern Europe included the Swiss Confederation and several autonomous city-states of Italy and the Holy Roman Empire. Among the Dutch, an oligarchy of wealthy businessmen called regents handled domestic affairs in each province’s Estates (assemblies). The provincial Estates held virtually all the power. A federal assembly, or States General, handled foreign affairs and war, but it did not possess sovereign authority. All issues had to be referred back to the local Estates for approval, and each of the seven provinces could veto any proposed legislation. Holland, the province with the largest navy and the most wealth, usually dominated the republic and the States General.

In each province, the Estates appointed an executive officer, known as the stadtholder, who carried out ceremonial functions and was responsible for military defense. Although in theory the stadtholder was freely chosen by the Estates and was answerable to them, in
practice the strong and influential House of Orange usually held the office of stadholder in several of the seven provinces of the republic. This meant that tensions always lingered between supporters of the House of Orange and those of the staunchly republican Estates, who suspected that the princes of Orange harbored monarchical ambitions. When one of them, William III, took the English throne in 1688 with his wife, Mary, the republic simply continued without stadholders for several decades.

The political success of the Dutch rested on their phenomenal commercial prosperity. The Dutch originally came to dominate European shipping by putting profits from their original industry—herring fishing—into shipbuilding. They boasted the lowest shipping rates and largest merchant marine in Europe, allowing them to undersell foreign competitors (see Chapter 14). In the seventeenth century global trade and commerce brought the Dutch the highest standard of living in Europe, perhaps in the world. Salaries were high, and all classes of society ate well. A scholar has described the Netherlands as “an island of plenty in a sea of want.” Consequently, the Netherlands experienced very few of the food riots that characterized the rest of Europe.10

The moral and ethical bases of Dutch commercial wealth were thrift, frugality, and religious toleration. Although there is scattered evidence of anti-Semitism, Jews enjoyed a level of acceptance and assimilation in business and general culture unique in early modern Europe. In the Dutch Republic, toleration paid off: it attracted a great deal of foreign capital and investment. After Louis XIV revoked the Edict of Nantes, many Huguenots fled France for the Dutch Republic. They brought with them a high level of artisanal skill and business experience as well as a loathing for state repression that would inspire the political views of the Enlightenment (see page 518).
Baroque Art and Music

Throughout European history, the cultural tastes of one age have often seemed unsatisfactory to the next. So it was with the baroque. The term baroque may have come from the Portuguese word for an “odd-shaped, imperfect pearl” and was commonly used by late-eighteenth-century art critics as an expression of scorn for what they considered an overblown, unbalanced style. Specialists now agree that the baroque style marked one of the high points in the history of European culture.

Rome and the revitalized Catholic Church of the late sixteenth century spurred the early development of the baroque. The papacy and the Jesuits encouraged the growth of an intensely emotional, exuberant art. These patrons wanted artists to go beyond the Renaissance focus on pleasing a small, wealthy cultural elite. They wanted artists to appeal to the senses and thereby touch the souls and kindle the faith of ordinary churchgoers while proclaiming the power and confidence of the reformed Catholic Church. In addition to this underlying religious emotionalism, the baroque drew its sense of drama, motion, and ceaseless striving from the Catholic Reformation. The interior of the famous Jesuit Church of Jesus in Rome — the Gesù — combined all these characteristics in its lavish, wildly active decorations and frescoes.

Taking definite shape in Italy after 1600, the baroque style in the visual arts developed with exceptional vigor in Catholic countries — in Spain and Latin America, Austria, southern Germany, and Poland. Yet baroque art was more than just “Catholic art” in the seventeenth century and the first half of the eighteenth. True, neither Protestant England nor the Netherlands

Satire on Tulipmania  This painting mocks the speculative boom in tulips that hit the Dutch Republic in the 1630s. The left side of the image depicts a group of monkeys dressed as wealthy investors engaged in buying and selling tulips. On the right side, investors experience the pain of the crash, as one monkey urinates on a worthless tulip and another is brought to trial for debt. (By Jan Brueghel the Younger [1601–1678], oil on panel/Private Collection/Johnny Van Haeften Ltd., London/Bridgeman Images)
ever came fully under the spell of the baroque, but neither did Catholic France. And Protestants accounted for some of the finest examples of baroque style, especially in music. The baroque style spread partly because its tension and bombast spoke to an agitated age that was experiencing great violence and controversy in politics and religion.

In painting, the baroque reached maturity early with Peter Paul Rubens (1577–1640), the most outstanding and most representative of baroque painters. Studying in his native Flanders and in Italy, where he was influenced by masters of the High Renaissance such as Michelangelo, Rubens developed his own rich, sensuous, colorful style, which was characterized by animated figures, melodramatic contrasts, and monumental size. Rubens excelled in glorifying monarchs such as Queen Mother Marie de’ Medici of France. He was also a devout Catholic; nearly half of his pictures treat Christian subjects. Yet one of Rubens’s trademarks was the fleshy, sensual nudes who populate his canvases as Roman goddesses, water nymphs, and remarkably voluptuous saints and angels.

In music, the baroque style reached its culmination almost a century later in the dynamic, soaring lines of the endlessly inventive Johann Sebastian Bach (1685–1750). Organist and choirmaster of several Lutheran churches across Germany, Bach was equally

Rubens, *Garden of Love*, 1633–1634. This painting is an outstanding example of the lavishness and richness of baroque art. Born and raised in northern Europe, Peter Paul Rubens trained as a painter in Italy. Upon his return to the Spanish Netherlands, he became a renowned and amazingly prolific artist, patronized by rulers across Europe. Rubens was a devout Catholic, and his work conveys the emotional fervor of the Catholic Reformation. (Oil on canvas/Prado, Madrid, Spain/Giraudon/Bridgeman Images)
at home writing secular concertos and sublime religious cantatas. Bach’s organ music combined the baroque spirit of invention, tension, and emotion in an unforgettable striving toward the infinite. Unlike Rubens, Bach was not fully appreciated in his lifetime, but since the early nineteenth century his reputation has grown steadily.

NOTES
Make Connections
Think about the larger developments and continuities within and across chapters.

1. This chapter has argued that, despite their political differences, rulers in absolutist and constitutionalist nations faced similar obstacles in the mid-seventeenth century and achieved many of the same goals. What evidence for this argument do you find in the chapter? Do you think that absolutist and constitutionalist rulers were, on the whole, more similar or more different?

2. Proponents of absolutism in western Europe believed that their form of monarchical rule was fundamentally different from and superior to what they saw as the “despotism” of Russia and the Ottoman Empire. What was the basis of this belief, and how accurate do you think it was?

Identify Key Terms
Identify and explain the significance of each item below.

- Peace of Westphalia (p. 468)
- Fronde (p. 474)
- mercantilism (p. 478)
- Peace of Utrecht (p. 479)
- Junkers (p. 482)
- boyars (p. 485)
- Cossacks (p. 485)
- sultan (p. 489)
- janissary corps (p. 489)
- millet system (p. 489)
- constitutionalism (p. 492)
- republicanism (p. 492)
- Puritans (p. 492)
- Protectorate (p. 494)
- Test Act (p. 496)
- stadholder (p. 497)

Review the Main Ideas
Answer the focus questions from each section of the chapter.

- What were the common crises and achievements of seventeenth-century European states? (p. 466)
- What factors led to the rise of the French absolutist state under Louis XIV, and why did absolutist Spain experience decline in the same period? (p. 471)
- What were the social conditions of eastern Europe, and how did the rulers of Austria and Prussia transform their nations into powerful absolutist monarchies? (p. 481)
- What were the distinctive features of Russian and Ottoman absolutism? (p. 484)
- Why and how did the constitutional state triumph in the Dutch Republic and England? (p. 492)
